

Rosemount 644 Temperature Transmitter

The Most Versatile Temperature Transmitter

Reduce complexity and simplify the day to day operations of your diverse temperature applications with the versatile Rosemount 644 family of temperature transmitters. Make better decisions for your process with the new and easy to use Rosemount 644 transmitter capabilities including: diagnostics, safety certification, integral transient protection and display options.

Rosemount 644 Family of Transmitters

Fit your needs within one model family with a customizable transmitter design

- DIN Head mount and Rail mount form factors
- 4-20 mA /HART® with Selectable Revisions, FOUNDATION Fieldbus or Profibus PA Protocol support
- SIL 2 certified to IEC 61508
- Enhanced Display with Local Operator Interface
- LCD Display
- Integral Transient Protection
- Enhanced Accuracy and Stability
- Transmitter-Sensor Matching with Callendar Van Dusen constants
- Variety of enclosures

Rosemount 644 Selection Guide

Rosemount 644 HART transmitters

HART Head mount

- Single or Dual sensor inputs for RTD, Thermocouple, mV and Ohm
- DIN A Head mount transmitter
- SIL 2 certified to IEC 61508
- LCD Display
- Enhanced Display with Local Operator Interface
- Integral Transient Protection
- Diagnostic Suite
- Enhanced Accuracy and Stability
- Transmitter-Sensor Matching with Callendar Van Dusen constants

HART Rail mount

- Single sensor input for RTD, Thermocouple, mV and Ohm
- Custom Alarm and Saturation Levels
- Transmitter-Sensor Matching with Callendar Van Dusen constants
- Hardware Alarm Switch

Rosemount 644 FOUNDATION Fieldbus

- Single sensor input for RTD, Thermocouple, mV and Ohm
- DIN A Head mount transmitter
- Standard function blocks: 2 Analog Inputs, 1 PID and 1 Backup Link Active Scheduler (LAS)
- LCD Display
- ITK 5.01 Compliant
- Transmitter Sensor Matching with Callendar Van Dusen constants

Rosemount 644 Profibus PA

- Single sensor input for RTD, Thermocouple, mV and Ohm
- DIN A Head mount transmitter
- Standard function blocks: 1 physical, 1 Transducer, and 1 Analog Out
- LCD Display
- Compliant to Profibus PA Profile 3.02
- Transmitter-Sensor Matching with Callendar Van Dusen constants

Easy to use Human-centered designs to make your job simple

- Diagnostic information and process health at your finger tips with intuitive Device Dashboards
- Communication clips are easily accessible when an LCD display is attached
- Easy wiring practices with captive sensor screw terminals and optimized wiring diagram

Optimize plant efficiency and increase visibility into the process with an expansive diagnostic offering

- Keep your process up and running with Hot Backup™ where if your primary sensor fails, a second sensor seamlessly takes over and prevents the measurement failure
- Tighten control with Sensor Drift Alert that detects drifting sensors and proactively notifies the user
- Enable predictive maintenance practices with Thermocouple Degradation Diagnostic that monitors the health of the thermocouple loop
- Improve quality with Minimum and Maximum Temperature Tracking that records temperature extremes of the process and the ambient environment

Ordering information

The Rosemount 644 is a versatile temperature transmitter that delivers field reliability and advanced accuracy and stability to meet demanding process needs.

Transmitter features include:

- HART/4-20 mA with Selectable Revision 5 and 7 selectable (Option Code A), FOUNDATION fieldbus (Option Code F) or PROFIBUS PA (Option Code W)
- DIN A Head mount or Rail Mount transmitter styles
- Dual Sensor Input (Option Code S)
- SIS SIL 2 Safety Certification (Option Code QT)
- LCD Display (Option Code M5)
- Local Operator Interface (Option Code M4)
- Advanced Diagnostics (Option Codes DC and DA1)
- Enhanced Transmitter Accuracy and Stability (Option Code P8)
- Transmitter-Sensor Matching (Option Code C2)

- (1) See [Table 2](#) for the validity of enclosures with individual approval options.
- (2) When ordered with XA, 1/2-in. NPT enclosure will come equipped with an M20 adapter with the sensor installed as a process ready.
- (3) Enclosure ships equipped with 50.8 mm (2-in) SST pipe bracket for mounting.
- (4) Bracket assembly only available with 3-Conduit housings J1 and J2.
- (5) See [Table 10 on page 21](#) for Enhanced Accuracy specifications.
- (6) Transient Protection option requires the use of J1, J2, J3, or J4.
- (7) Available with Intrinsically Safe approvals only. For FM Intrinsically Safe or non-incendive approval (option code I5), install in accordance with Rosemount drawing 03151-1009.
- (8) Configures the HART output to HART Revision 7. The device can be field configured to HART Revision 5 if needed.

Note

For additional options (e.g. “K” codes), please contact your local Emerson Process Management representative.

Tagging

Hardware

- 13 characters total
- Tags are adhesive labels
- Tag is permanently attached to transmitter

Software

- The transmitter can store up to 13 characters for FOUNDATION fieldbus and Profibus PA or 8 for HART protocol. If no characters are specified, the first 8 characters of the hardware tag are the default. An optional 32 character Long Software Tag is available when option code HR7 is ordered.

Considerations

External Ground Screw Assembly

The external ground screw assembly can be ordered by specifying code G1 when an enclosure is specified. However, some approvals include the ground screw assembly in the transmitter shipment, hence it is not necessary to order code G1. The table below identifies which approval options include the external ground screw assembly and which do not.

Option Code	External Ground Screw Assembly Included?
E5, I1, I2, I5, I6, I7, K5, K6, NA, I3, KB	No—Order option code G1
E1, E2, E3, E4, E7, K7, N1, N7, ND, K1, K2, KA, NK, N3, KD, T1	Yes

Specifications

HART, FOUNDATION Fieldbus, and Profibus PA

Functional Specifications

Inputs

User-selectable; sensor terminals rated to 42.4 Vdc. See “Accuracy” on page 17 for sensor options.

Output

Single 2-wire device with either 4–20 mA/HART, linear with temperature or input; or completely digital outputs with FOUNDATION fieldbus communication (ITK 5.01 compliant), or PROFIBUS PA (compliant with profile 3.02).

Isolation

Input/output isolation tested to 600 Vrms.

Local Display Options

LCD Display

An optional 11 digit, 2 line integral LCD display operates with a floating or fixed decimal point. It displays engineering units (°F, °C, °R, K, Ohms and mV), mA, and percent of range. The display can be configured to alternate between selected display options. Display settings are pre-configured at the factory according to the standard transmitter configuration. They can be re-configured in the field using either HART, FOUNDATION fieldbus, or Profibus PA communications.

LCD Display with Local Operator Interface

An optional 14 digit, 2 line integral LCD display operates with a floating or fixed decimal point. The LOI includes all features and functionality available in the regular display with an added 2-button configuration capability directly at the display interface. The LOI also has optional Password Protection for secure operations. The LOI is only available on the 644 HART Head mount product.

For more information on the LOI configuration options or further functionality that the LOI offers, see [Appendix D: Local Operator Interface \(LOI\)](#) in the Rosemount 644 Temperature Transmitter Product Manual (00809-0200-4728), available on [Rosemount.com](#).

Mounting

The 644R attaches directly to a wall or a DIN rail. The 644H installs in a connection head or universal head mounted directly on a sensor assembly, apart from a sensor assembly using a universal head, or to a DIN rail using an optional mounting clip.

Special Mounting Considerations

See “Mounting Kits for 644H” on page 31 for the special hardware that is available to:

- Mount a 644H to a DIN rail. (see Table 3 on page 10)
- Retrofit a new 644H to replace an existing 644H transmitter in an existing threaded sensor connection head. (see Table 3 on page 10)

Sanitary Housing Surface

Surface finish is polished to 32 RMA. Laser etched product marking on housing and standard covers.

Performance Specifications

EMC (ElectroMagnetic Compatibility) NAMUR NE 21 Standard

The 644H HART meets the requirements for NAMUR NE 21 Rating.

Susceptibility	Parameter	Influence
		HART
ESD	■ 6 kV contact discharge	None
	■ 8 kV air discharge	
Radiated	■ 80 – 1000 MHz at 10 V/m AM	< 1.0%
Burst	■ 1 kV for I.O.	None
Surge	■ 0.5 kV line–line	None
	■ 1 kV line–ground (I.O. tool)	
Conducted	■ 10 kHz to 80 MHz at 10 V	< 1.0%

CE Electromagnetic Compatibility Compliance Testing

The 644 is compliant with Directive 2004/108/EC. Meets the criteria under IEC 61326:2006, IEC 61326-2-3:2006

Power Supply Effect

Less than ±0.005% of span per volt

Stability

RTDs and thermocouples have a stability of ±0.15% of output reading or 0.15 °C (whichever is greater) for 24 months

When ordered with the P8 option code:

- RTDs: ±0.25% of reading or 0.25 °C, whichever is greater, for 5 years
- Thermocouples: ±0.5% of reading or 0.5 °C, whichever is greater, for 5 years

Self Calibration

The analog-to-digital measurement circuitry automatically self-calibrates for each temperature update by comparing the dynamic measurement to extremely stable and accurate internal reference elements.

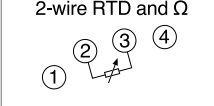

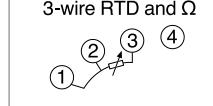

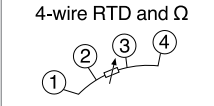

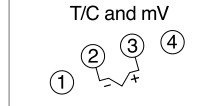

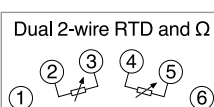

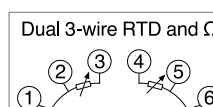

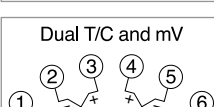

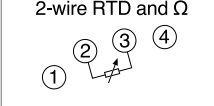

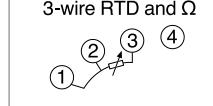

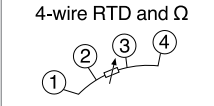

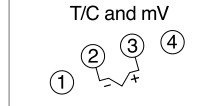

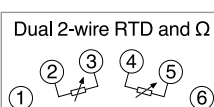

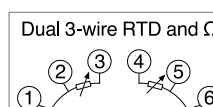

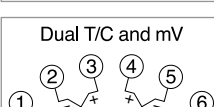

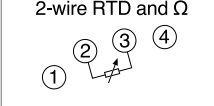

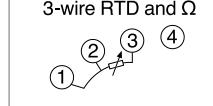

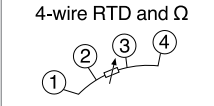

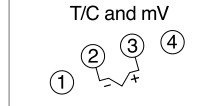

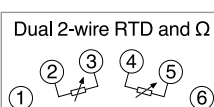

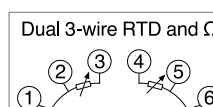

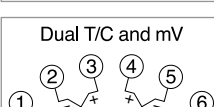

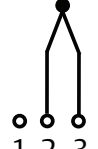

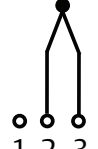

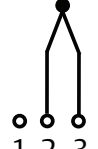

Vibration Effect

The 644 HART is tested to the following specifications with no effect on performance per IEC 60770-1, 2010:

Frequency	Vibration
10 to 60 Hz	0.35 mm displacement
60 to 1000 Hz	5 g (50 m/s ²) peak acceleration

The 644 Fieldbus and Profibus are tested to the following specifications with no effect on performance per IEC 60770-1: 1999

Frequency	Vibration
10 to 60 Hz	0.21 mm displacement
60 to 2000 Hz	3 g peak acceleration

FOUNDATION Fieldbus Specifications

Function Blocks

Resource Block

- The resource block contains physical transmitter information including available memory, manufacture identification, device type, software tag, and unique identification.

Transducer Block

- The transducer block contains the actual temperature measurement data, including sensor 1 and terminal temperature. It includes information about sensor type and configuration, engineering units, linearization, reranging, damping, temperature correction, and diagnostics.

LCD Block

- The LCD block is used to configure the local display, if an LCD Display is being used.

Analog Input (AI)

- Processes the measurement and makes it available on the fieldbus segment
- Allows filtering, alarming, and engineering unit changes.

PID Block

- The transmitter provides control functionality with one PID function block in the transmitter. The PID block can be used to perform single loop, cascade, or feedforward control in the field.

Block	Execution Time (milliseconds)
Resource	–
Transducer	–
LCD Block	–
Analog Input 1	45
Analog Input 2	45
PID 1	60

Turn-on Time

Performance within specifications in less than 20 seconds after power is applied, when damping value is set to 0 seconds.

Status

If self-diagnostics detect a sensor burnout or a transmitter failure, the status of the measurement will be updated accordingly. Status may also send the AI output to a safe value.

Power Supply

Powered over FOUNDATION fieldbus with standard fieldbus power supplies. The transmitter operates between 9.0 and 32.0 Vdc, 12 mA maximum.

Alarms

The AI function block allows the user to configure the alarms to HI-HI, HI, LO, or LO-LO with hysteresis settings.

Backup Link Active Scheduler (LAS)

The transmitter is classified as a device link master, which means it can function as a Link Active Scheduler (LAS) if the current link master device fails or is removed from the segment.

The host or other configuration tool is used to download the schedule for the application to the link master device. In the absence of a primary link master, the transmitter will claim the LAS and provide permanent control for the H1 segment.

Profibus PA Specifications

Function Blocks

Physical Block

- The Physical Block contains physical transmitter information including manufacturer identification, device type, software tag, and unique identification.

Transducer Block

- The Transducer Block contains the actual temperature measurement data, including sensor 1 and terminal temperature. It includes information about sensor type and configuration, engineering units, linearization, re-ranging, damping, temperature correction, and diagnostics.

Analog Input Block (AI)

- The Analog Input Block processes the measurement and makes it available on the Profibus segment. Allows filtering, alarming, and engineering unit changes.

Turn on time:

Performance within specifications in less than 20 seconds after power is applied, when damping value is set to 0 seconds.

Power Supply:

Powered over Profibus with standard fieldbus power supplies. The transmitter operates between 9.0 and 32.0 Vdc, 12 mA maximum.

Alarms

The AI function block allows the user to configure the alarms to HI-HI, HI, LO, or LO-LO with hysteresis settings.

4–20 mA / HART Specifications

Power Supply

External power supply required. Transmitters operate on 12.0 to 42.4 Vdc transmitter terminal voltage (with 250 ohm load, 18.1 Vdc power supply voltage is required). Transmitter power terminals rated to 42.4 Vdc.

Load Limitations

(1) Without transient protection (optional).

NOTE

HART Communication requires a loop resistance between 250 and 1100 ohms. Do not communicate with the transmitter when power is below 12 Vdc at the transmitter terminals.

Temperature Limits

	Operating Limit	Storage Limit
With LCD ⁽¹⁾	-40 to 185 °F -40 to 85 °C	-50 to 185 °F -45 to 85 °C
Without LCD	-40 to 185 °F -40 to 85 °C	-60 to 248 °F -50 to 120 °C

(1) LCD may not be readable and display updates will be slower at temperatures below -22 °F (-30 °C).

Hardware and Software Failure Mode

The 644 features software driven alarm diagnostics and an independent circuit which is designed to provide backup alarm output if the microprocessor software fails. The alarm direction (HI/LO) is user-selectable using the failure mode switch. If failure occurs, the position of the switch determines the direction in which the output is driven (HI or LO). The switch feeds into the digital-to-analog (D/A) converter, which drives the proper alarm output even if the microprocessor fails. The values at which the transmitter software drives its output in failure mode depends on whether it is configured to standard, custom, or NAMUR-compliant (NAMUR recommendation NE 43, June 1997) operation. Table 7 shows the configuration alarm ranges.

Table 7. Available Alarm Range⁽¹⁾

	Standard	NAMUR- NE 43 Compliant
Linear Output:	$3.9 \leq I^{(2)} \leq 20.5$	$3.8 \leq I \leq 20.5$
Fail High:	$21.75 \leq I \leq 23$	$21.5 \leq I \leq 23$
Fail Low:	$3.5 \leq I \leq 3.75$	$3.5 \leq I \leq 3.6$

(1) Measured in mA.

(2) I = Process Variable (current output).

Custom Alarm and Saturation Level

Custom factory configuration of alarm and saturation level is available with option code C1 for valid values. These values can also be configured in the field using a Field Communicator.

Turn-on Time

Performance within specifications in less than 5.0 seconds after power is applied, when damping value is set to 0 seconds.

External Transient Protection

The Rosemount 470 Transient Protector prevents damage from transients induced by lightning, welding, or heavy electrical equipment. For more information, refer to the Rosemount 470 Transient Protector Product Data Sheet (document number 00813-0100-4191).

Transient Protection (option code T1)

The transient protector helps to prevent damage to the transmitter from transients induced on the loop wiring by lightning, welding, heavy electrical equipment, or switch gears. The transient protection electronics are contained in an add-on assembly that attaches to the standard transmitter terminal block. The external ground lug assembly (code G1) is included with the Transient Protector. The transient protector has been tested per the following standard:

- IEEE C62.41-1991 (IEEE 587)/ Location Categories B3.
6kV/3kA peak (1.2 50 Ωs Wave 8 20 Ωs Combination Wave)
6kV/0.5kA peak (100 kHz Ring Wave) EFT, 4kVpeak, 2.5kHz, 5*50nS
- Loop resistance added by protector: 22 ohms max.
- Nominal clamping voltages: 90 V (common mode), 77 V (normal mode)

(1) No minimum or maximum span restrictions within the input ranges. Recommended minimum span will hold noise within accuracy specification with damping at zero seconds.

(2) The published digital accuracy applies over the entire sensor input range. Digital output can be accessed by HART or FOUNDATION fieldbus Communications or Rosemount control system.

(3) Total Analog accuracy is the sum of digital and D/A accuracies. This is not applicable for FOUNDATION fieldbus.

(4) Total digital accuracy for thermocouple measurement: sum of digital accuracy +0.5 °C. (cold junction accuracy).

(5) Digital accuracy for NIST Type B T/C is ±3.0 °C (±5.4 °F) from 100 to 300 °C (212 to 572 °F).

(6) Digital accuracy for NIST Type K T/C is ±0.70 °C (±1.26 °F) from -180 to -90 °C (-292 to -130 °F).

Accuracy Example (HART devices)

When using a Pt 100 ($\alpha = 0.00385$) sensor input with a 0 to 100 °C span:

- Digital accuracy = ± 0.15 °C
- D/A accuracy = $\pm 0.03\%$ of 100 °C or ± 0.03 °C
- Total accuracy = ± 0.18 °C.

Accuracy Example (FOUNDATION fieldbus and Profibus PA devices)

When using a Pt 100 ($\alpha = 0.00385$) sensor input:

- Total accuracy = ± 0.15 °C.
- No D/A accuracy effects apply

(1) Change in ambient is with reference to the calibration temperature of the transmitter 68 °F (20 °C) from factory.

(2) Does not apply to FOUNDATION fieldbus.

Temperature Effects Example (HART devices)

When using a Pt 100 ($\alpha = 0.00385$) sensor input with a 0–100 °C span at 30 °C ambient temperature:

- Digital Temperature Effects: $0.003\text{ °C} \times (30 - 20) = 0.03\text{ °C}$
- D/A Effects: $[0.001\% \text{ of } 100] \times (30 - 20) = 0.01\text{ °C}$
- Worst Case Error: Digital + D/A + Digital Temperature Effects + D/A Effects = $0.15\text{ °C} + 0.03\text{ °C} + 0.03\text{ °C} + 0.01\text{ °C} = 0.22\text{ °C}$
- Total Probable Error: $\sqrt{0.15^2 + 0.03^2 + 0.03^2 + 0.01^2} = 0.16\text{ °C}$

Temperature Effects Examples (FOUNDATION fieldbus devices and Profibus PA)

When using a Pt 100 ($\alpha = 0.00385$) sensor input at 30 °C span at 30 °C ambient temperature:

- Digital Temperature Effects: $0.003\text{ °C} \times (30 - 20) = 0.03\text{ °C}$
- D/A Effects: No D/A effects apply
- Worst Case Error: Digital + Digital Temperature Effects = $0.15\text{ °C} + 0.03\text{ °C} = 0.18\text{ °C}$
- Total Probable Error: $\sqrt{0.15^2 + 0.03^2} = 0.153\text{ °C}$

- (1) No minimum or maximum span restrictions within the input ranges. Recommended minimum span will hold noise within accuracy specification with damping at zero seconds.
- (2) Digital accuracy: Digital output can be accessed by the Field Communicator.
- (3) Total Analog accuracy is the sum of digital and D/A accuracies.
- (4) Applies to HART / 4-20 mA devices.
- (5) Total digital accuracy for thermocouple measurement: sum of digital accuracy +0.25 °C (0.45 °F) (cold junction accuracy).
- (6) Digital accuracy for NIST Type B is ±3.0 °C (±5.4 °F) from 100 to 300 °C (212 to 572 °F).
- (7) Digital accuracy for NIST Type K is ±0.50 °C (±0.9 °F) from -180 to -90 °C (-292 to -130 °F).

Reference Accuracy Example (HART only)

When using a Pt 100 ($\alpha = 0.00385$) sensor input with a 0 to 100 °C span: Digital Accuracy would be ± 0.10 °C, D/A accuracy would be $\pm 0.02\%$ of 100 °C or ± 0.02 °C, Total = ± 0.12 °C.

Differential Capability Exists Between Any Two Sensor Types (dual-sensor option)

For all differential configurations, the input range is X to Y where:

- X = Sensor 1 minimum – Sensor 2 maximum *and*
- Y = Sensor 1 maximum – Sensor 2 minimum.

European Directive Information

The EC declaration of conformity can be found in the Rosemount 644 Temperature Transmitter Quick Installation Guide. The most recent revision can be found at www.emersonprocess.com.

Ordinary Location Certification from FM Approvals

As standard, the transmitter has been examined and tested to determine that the design meets basic electrical, mechanical, and fire protection requirements by FM Approvals, a nationally recognized testing laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Special Conditions for Safe Use (X)

The apparatus must be installed in an enclosure which affords a degree of protection of at least IP20.

Non-metallic enclosures must have a surface resistance of less than $1G\Omega$.

Light alloy or zirconium enclosures must be protected from impact and friction when installed.

Configuration

Transmitter Configuration

The transmitter is available with standard configuration setting for either HART (see [Standard HART Configuration](#)), FOUNDATION fieldbus (see [Standard Foundation fieldbus Configuration](#)) or Profibus PA (see [Standard Profibus PA Configuration](#)). The configuration settings and block configuration may be changed in the field with Emerson’s DeltaV®, AMS™ Suite, Handheld Field Communicator or other host or configuration tool.

Standard HART Configuration

Unless specified, the transmitter will be shipped as follows:

Sensor Type	RTD, Pt 100 ($\alpha=0.00385$, 4-wire)
4 mA Value	0 °C
20 mA Value	100 °C
Output	Linear with temperature
Saturation Levels	3.9 / 20.5 mA
Damping	5 sec.
Line Voltage Filter	50 Hz
Alarm	High (21.75 mA)

Specifications and Reference Data for 644 HART (Device revision 7 or previous)

Functional Specifications

Inputs

User-selectable; sensor terminals rated to 42.4 Vdc. See “Accuracy” on page 17 for sensor options.

Output

Single 2-wire device with either 4-20 mA/HART, linear with temperature or input. Device supports protocol revision HART 5.

Isolation

Input/output isolation tested to 600 Vrms.

Local Display

The optional five-digit integral LCD Display includes a floating or fixed decimal point. It can also display engineering units (°F, °C, °R, K, Ω, and mV), mA, and percent of span. The display can be configured to alternate between selected display options. Display settings are preconfigured at the factory according to the standard transmitter configuration. They can be reconfigured in the field using a compliant Field Communicator.

Humidity Limits

0–95% relative humidity

Update Time

≤ 0.5 sec.

Accuracy (default configuration) PT 100

HART (0-100 °C): ±0.18 °C

Mounting

The 644H installs in a connection head or universal head mounted directly on a sensor assembly, apart from a sensor assembly using a universal head, or to a DIN rail using an optional mounting clip.

Special Mounting Considerations

See “Mounting Kits for 644H” on page 31 for the special hardware that is available to:

- Mount a 644H to a DIN rail. (see page 30)
- Retrofit a new 644H to replace an existing 644H transmitter in an existing threaded sensor connection head.(see Table 3 on page 10)

Enclosure Ratings (644H)

All available enclosures are Type 4X, IP66, and IP68.

Sanitary Housing Surface

Surface finish is polished to 32 RMA. Laser etched product marking on housing and standard covers.

Performance Specifications

EMC (ElectroMagnetic Compatibility)

NAMUR NE 21 Standard

The 644H HART meets the requirements for NAMUR NE 21 Rating.

Susceptibility	Parameter	Influence
		HART
ESD	■ 6 kV contact discharge	None
	■ 8 kV air discharge	
Radiated	■ 80 – 1000 MHz at 10 V/m AM	< 1.0%
Burst	■ 1 kV for I.O.	None
Surge	■ 0.5 kV line–line	None
	■ 1 kV line–ground (I.O. tool)	
Conducted	■ 100 kHz to 80 MHz at 10 V	< 1.0%

CE Electromagnetic Compatibility Compliance Testing

The 644 is compliant with Directive 2004/108/EC. Meets the criteria under IEC 61326:2006

Power Supply Effect

Less than ±0.005% of span per volt

Stability

RTDs and thermocouples have a stability of ±0.15% of output reading or 0.15 °C (whichever is greater) for 24 months

Self Calibration

The analog-to-digital measurement circuitry automatically self-calibrates for each temperature update by comparing the dynamic measurement to extremely stable and accurate internal reference elements.

Vibration Effect

The 644 is tested to the following specifications with no effect on performance per IEC 60770-1, 1999:

Frequency	Vibration
10 to 60 Hz	0.21 mm displacement
60 to 2000 Hz	3 g peak acceleration

Tagging

Hardware

- 13 characters total
- Tags are adhesive labels affixed to the side of the transmitter
- Permanently attached to transmitter
- Character height is 1/16-in (1.6 mm)

Software

- The transmitter can store up to 8 characters for the HART protocol
- Order Software Tag with C1 option code

4–20 mA / HART Specifications

Power Supply

External power supply required. Transmitters operate on 12.0 to 42.4 Vdc transmitter terminal voltage (with 250 ohm load, 18.1 Vdc power supply voltage is required). Transmitter power terminals rated to 42.4 Vdc.

Load Limitations

(1) Without transient protection (optional).

NOTE

HART Communication requires a loop resistance between 250 and 1100 ohms. Do not communicate with the transmitter when power is below 12 Vdc at the transmitter terminals.

Temperature Limits

	Operating Limit	Storage Limit
With LCD ⁽¹⁾	-40 to 185 °F -40 to 85 °C	-50 to 185 °F -45 to 85 °C
Without LCD	-40 to 185 °F -40 to 85 °C	-60 to 248 °F -50 to 120 °C

(1) LCD may not be readable and display updates will be slower at temperatures below -4 °F (-20 °C).

Hardware and Software Failure Mode

The 644 features software driven alarm diagnostics and an independent circuit which is designed to provide backup alarm output if the microprocessor software fails. The alarm direction (HI/LO) is user-selectable using the failure mode switch. If failure occurs, the position of the switch determines the direction in which the output is driven (HI or LO). The switch feeds into the digital-to-analog (D/A) converter, which drives the proper alarm output even if the microprocessor fails. The values at which the transmitter software drives its output in failure mode depends on whether it is configured to standard, custom, or NAMUR-compliant (NAMUR recommendation NE 43, June 1997) operation. Table 7 shows the configuration alarm ranges.

Table 19. Available Alarm Range⁽¹⁾

	Standard	NAMUR- NE 43 Compliant
Linear Output:	$3.9 \leq I^{(2)} \leq 20.5$	$3.8 \leq I \leq 20.5$
Fail High:	$21.75 \leq I \leq 23$	$21.5 \leq I \leq 23$
Fail Low:	$3.5 \leq I \leq 3.75$	$3.5 \leq I \leq 3.6$

(1) Measured in mA.

(2) I = Process Variable (current output).

Custom Alarm and Saturation Level

Custom factory configuration of alarm and saturation level is available with option code C1 for valid values. These values can also be configured in the field using a Field Communicator.

Turn-on Time

Performance within specifications in less than 5.0 seconds after power is applied, when damping value is set to 0 seconds.

Transient Protection

The Rosemount 470 Transient Protector prevents damage from transients induced by lightning, welding, or heavy electrical equipment. For more information, refer to the Rosemount 470 Transient Protector Product Data Sheet (document number 00813-0100-4191).

Accuracy

For complete accuracy tables by sensor type, see Table 8 on page 17. For ambient temperature effects by sensor type, see Table 9 on page 19. For Enhanced Accuracy specifications, see Table 10 on page 21.

Configuration
