

Two-wire Radar Level Transmitter

The Rosemount 5400 Series is a reliable 2-wire radar level transmitter for liquids and slurries, designed for outstanding performance in a wide range of applications and process conditions. It measures level directly and is unaffected by most fluid property changes, including temperature, pressure, vapor gas mixture, density, turbulence, bubbling/boiling, dielectric, pH, viscosity, crystallization, etc.

- *Innovative design. Best-in-class performance*
- *Non-contacting, making it virtually unaffected by process conditions*
- *No moving parts, means little or no maintenance*
- *Application flexibility with full range of antennas, and two models 5402 (26 GHz) and 5401 (6 GHz)*
- *Less affected by coating with Condensation Resistant Antenna*
- *Reduced echoes from obstacles / tank walls with Circular Polarization*
- *Powerful, easy-to-use configuration tool with "Measure-and-Learn" function*

Innovative Measurement Technologies for a Better Bottom Line

The 5400 Series transmitter is used for level measurements on liquids and slurries with various temperatures, pressures and vapor gas mixtures. Because of its advanced surface tracking capability, the transmitter can detect and evaluate all echoes within the tank.

The Rosemount 5400 Series is easily configured for a wide range of applications and process conditions. In addition, it incorporates advanced signal processing and smart echo tracking features.

MEASUREMENT PRINCIPLE

The distance to the surface is measured by short radar pulses, which are transmitted from the antenna at the tank top.

When a radar pulse reaches a media with a different dielectric constant, part of the energy is reflected back to the transmitter. The time difference between the transmitted and the reflected pulse is proportional to the distance, from which the level, volume and level rate, are calculated.

MODELS

The 5400 Series consists of two models:

- Rosemount 5401, Low Frequency Transmitter (~ 6 GHz).
- Rosemount 5402, High Frequency Transmitter (~ 26 GHz).

The availability of two frequencies allows the user to choose the model that best fit the installation and process conditions, with the 5402 being the preferred choice for most applications.

The 5402 transmitter is the preferred choice in most applications because its narrow radar beam offers greater mounting flexibility.

The 5401 transmitter is used in applications with some extreme process conditions.

Catalog 2008 - 2009

Rosemount 5400 Series

APPLICATION EXAMPLES FOR THE 5400 SERIES RADAR LEVEL TRANSMITTER

Tanks, vessels, and containers with calm surfaces

Non-contacting radar can also be used in less challenging applications, such as storage and buffer tanks:

- It is easy to mount, maintenance-free, and highly accurate
- Gives precise monitoring and control of the process

Overflow and underfill detection

The 5400 Series can be advantageous in risk reduction systems:

- Continuous measurement may reduce or simplify proof-tests
- Multiple 5400's can be used in the same tank

Corrosives

Radar measurement is ideal for most corrosive products, such as caustics, acids, solvents and many other chemicals:

- Not in contact with process product
- Wide material offering such as PTFE, Hastelloy and Monel
- Works well also in non-metallic tanks

Sticky, viscous and crystallizing products

The best-in-class 5400 Series provides an accurate and reliable level reading with difficult products, such as resins and adhesives:

- Non-contacting is best practice
- Almost unaffected by coating and build-up due to the uniquely designed condensation resistant antennas

Sludges and slurries

Applications like mud, pulp-stock and lime slurries are ideal for non-contacting measurement:

- Immune to splashing and solids content
- Unaffected by density changes
- No re-calibration, no or little maintenance

Reactor vessels

The innovative design of the 5400 Series makes it an excellent choice for the most difficult applications, such as reactor vessels:

- Unique circular polarization provides greater mounting flexibility – no clearance distance from tank wall is needed!
- Direct measurement – independent of most variations in process conditions, such as density, dielectric, vapor, temperature and pressure
- Can handle turbulent conditions, whether created by agitation, top-filling or process reaction

Mounting flexibility

The versatile 5400 Series can be used in mounting configurations other than standard nozzles:

- Fits most existing pipes: 2-8 in.
- Easy to isolate from the process – use a ball-valve

Still-pipes and bridles reduce the influence of foam, turbulence and tank obstructions. Ball-valves can be used on both still-pipes and nozzles.

Underground tanks

The mounting flexibility of the 5400 Series makes it an excellent choice for many underground tanks:

- Easy top-mounting
- Can handle long narrow nozzles, and pipes
- Unaffected by dirty products with solids content

For more information on which model and antenna to use for the applications above, see “Transmitter and Antenna Overview” on page 8 and “Measuring Range” on page 11, or contact your local Emerson Process Management representative.

Reliable Measurements through Advanced Surface Tracking Capability

Different process conditions, such as the tank atmosphere, foam, turbulence and products with low dielectric constants, will decrease the returned signal and the radar transmitter may lose track of the surface. It is important that the transmitter can detect very weak signals.

The Rosemount 5400 Series transmitter incorporates several new innovations to provide the best possible surface tracking capability. These features contribute to more reliable measurements and better performance than with standard 2-wire transmitters.

DUAL PORT TECHNOLOGY

Dual Port Technology, two ports for transmitting and receiving signals, reduces noise. Even with a weak returned signal, the transmitter will be able to detect it.

A transmitter with Dual Port Technology can receive 75% less reflected energy than a standard 2-wire transmitter, and still have equal or better surface tracking capability.

Standard 2-wire radar level transmitters only use one port on the microwave generation module for sending and receiving signals, which introduces significant losses in the microwave generation.

CONDENSATION RESISTANT ANTENNA

The tank seal is the part of the waveguide that protects the transmitter from the process atmosphere. Rosemount 5400 Series has a larger protective surface towards the tank, making the transmitter less sensitive to dirt and condensation.

Standard Transmitter

Rosemount 5402

Rosemount 5400 Series transmitters are equipped with an enlarged PTFE tank seal to protect the antenna from contamination and condensation, an especially important feature for high frequency antennas.

CIRCULAR POLARIZATION

Standard radar transmitters utilize linear polarization resulting in greater influence from disturbing objects. The 5400 Series transmitter has circular polarization, which reduces echoes from tank walls and disturbing objects. This means increased installation flexibility and measurement reliability. The transmitter can be installed without any clearance distance to the tank wall.

Circular polarization allows the transmitter to be installed without any clearance distance to the tank wall.

Rosemount 5400 Series

System Integration

The Rosemount 5400 Series is a loop-powered device (it uses the same two wires for power supply and communication) that supports both FOUNDATION™ fieldbus, and the analog 4-20 mA with superimposed digital HART®.

EASY INTEGRATION

The 5400 Series supports the latest interoperability standards and can easily be integrated into almost any host system.

Rosemount Radar Master, the included software package, can be used to configure the transmitter in five simple steps.

Any other DD- (Device Description) or enhanced EDDL-compatible configuration tool such as AMS, DeltaV or the 375 Field Communicator, can also be used.

THE FOUNDATION FIELDBUS ADVANTAGE

No proprietary connections are required for a complete configuration – not even for the echo-curve! This can be done remotely in the control room over the fieldbus segment using Rosemount Radar Master. Basic Configuration can also be performed using any DD-compatible configuration tool, such as DeltaV.

Additionally, with the strength of eleven function blocks and interoperability certificates from all major host system vendors, the 5400 Series will unleash the true benefits of FOUNDATION™ fieldbus.

INNOVATIVE PLANTWEB CAPABILITIES

If the performance of the microwave board starts to degrade, or if the internal temperature sensor gets too hot, a PlantWeb Alert, categorized as a warning, can be displayed to the operator.

Alerts describe the problem and recommend actions. Precise diagnostics capabilities like this and many more will simplify troubleshooting and enable predictive maintenance.

The 5400 Series can be integrated into almost any new or existing plant. Configure it remotely in the control room over the 4-20 mA/Hart® or FOUNDATION™ fieldbus wires. No proprietary connections are needed.

Product Data Sheet

00813-0100-4026, Rev FB
Catalog 2008 - 2009

Rosemount 5400 Series

DISPLAY

Data can be read from the optional integral display or remotely using the Rosemount 751 Field Signal Indicator (see Product Data Sheet, document number 00813-0100-4378) for 4-20 mA / HART® or the Rosemount 752 Remote Indicator for FOUNDATION™ fieldbus (see Product Data Sheet, document number 00813-0100-4377).

TRANSMITTER VARIABLES

It is possible to receive information about Level, Distance, Volume, Signal Strength, Level Rate, Analog Output Current, % of Range, and Internal Temperature, from one Rosemount 5400 Series radar level transmitter.

CONFIGURATION

Basic configuration can easily be done with Rosemount RadarMaster, a Rosemount 275/375 Handheld Communicator, the AMS™ Suite, DeltaV™ or any other DD compatible host system. For advanced configuration features, RadarMaster is required.

RadarMaster is a user-friendly, Windows based software package that provides easy configuration and service. A wizard guides the user to enter the required parameters for a basic configuration. "Measure & Learn" functionality is accessed through RadarMaster. It enables automatic suggestion of threshold and disturbance echo settings, thereby making tough applications easy to configure. RadarMaster also includes waveform plots, off-line configuration, logging and extensive on-line help.

For 4-20 mA or HART®, a HART® modem is required for communication between the transmitter and RadarMaster (part number 03300-7004-0001 for RS232 and 03300-7004-0002 for USB interface).

For FOUNDATION™ fieldbus devices, RadarMaster is connected to the fieldbus segment via the fieldbus modem (part number 03095-5108-0001 for PCMCIA). For more information, see the 5400 FOUNDATION™ fieldbus Reference Manual (document number 00809-0100-4032) or consult the factory.

Rosemount 5400 transmitters support PlantWeb® Alerts.

It is possible to order a pre-configured transmitter, by filling in the Configuration Data Sheet (CDS).

The integral display is easily configured with Rosemount RadarMaster or the 275/375 Handheld Communicator. The user can choose which variable to display or if toggling between different variables should be applied.

ADVANCED PLANTWEB® FUNCTIONALITY

The Rosemount 5400 Series transmitter powers PlantWeb® through innovative measurement technologies and advanced diagnostics that provide more reliability, easier configuration, reduced process downtime, and lower installation and operating costs for a better bottom line.

With Rosemount RadarMaster, a noise threshold curve and false echo registration can automatically be created by clicking the Learn button.

Transmitter and Antenna Overview

The Rosemount 5400 Series transmitter consists of the transmitter housing and an antenna assembly. The transmitter housing contains all electronics. The antenna assembly seals off the tank atmosphere from the transmitter housing and its surroundings.

The 5400 Series is delivered as a single assembly for easy out-of-box installation, with no special tools.

The transmitter is available with Intrinsically Safe⁽¹⁾ / Non-Incendive or Explosion-proof / Flameproof approvals.

For more information see "Product Certifications."

TRANSMITTER HOUSING ①

There are two models available with different frequencies: the 5402 (~26 GHz, K-band) and the 5401 (~6 GHz, C-band). The models utilize different frequencies, and antennas, so transmitter housings are not interchangeable.

The transmitter housing has two integral 1/2-in. NPT cable entries for conduit / cable connections. Adapters to other connection types are available, see "Ordering Information" on page 28 and Level-28.

The dual-compartment housing separates cabling from the electronics for increased moisture resistance.

The transmitter housing can be rotated and removed from the antenna assembly for service or replacement, without opening the tank.

ANTENNA ASSEMBLY ②

The antenna assembly is the only part in contact with the tank atmosphere, and it consists of an antenna, an O-ring, a tank seal, a flange (see "Standard Flanges" on page 26) or a thread (NPT).

The antenna focuses the radar beam. The Rosemount 5400 Series Radar Level transmitters are equipped with high performance cone, rod and process seal antennas in various sizes and materials.

It is generally recommended that is to use the largest possible antenna be used to achieve highest gain.

For information on temperature and pressure, see "Temperature and Pressure Ratings" on page 18.

(1) *Fisco Intrinsic safety is available for Foundation™ fieldbus. See "Ordering Information" on page Level-28 and 31 for more information on available approvals.*

(1) The obstruction should not be within the radar beam. Preferred choices due to more narrow radar beam: Model 5402, and cone antenna.
(2) An extended cone antenna can be used.
(3) The active part must protrude beneath the nozzle.
(4) Build-up can often be avoided or reduced by using heat-tracing or cleaning arrangements.
(5) Use a 6 or 8 in. cone antenna.
(6) Foam can either reflect, be invisible or absorb the radar signal. Pipe mounting is advantageous since it reduces the foaming tendency.
(7) See wetted material on page Level-10.

Catalog 2008 - 2009

Rosemount 5400 Series

Measuring Range

The measuring range depends on the microwave frequency, antenna size, the dielectric constant (ϵ_r) of the liquid, and process conditions. A higher dielectric constant value means a stronger reflection (see the following tables). The figures below are guidelines for optimum performance. Larger measuring ranges may be possible. For more information, contact your local Emerson Process Management office.

- A. Oil, gasoline or other hydrocarbons, and petrochemicals ($\epsilon_r = 1.9-4.0$).
In pipes or with ideal surface conditions, for some liquefied gases ($\epsilon_r = 1.4-4.0$)
- B. Alcohols, concentrated acids, organic solvents, oil/water mixtures, and acetone ($\epsilon_r = 4.0-10.0$).
- C. Conductive liquids, e.g. water based solutions, dilute acids, and alkalis ($\epsilon_r > 10.0$).

Rosemount 5402, Maximum Recommended Measuring Range, ft (m)

(1) Pipe installations only. NA=not applicable.

(2) Pipe installations are not allowed with rod antennas.

Mechanical Mounting Recommendations

MOUNTING LOCATION

For optimal performance, the transmitter should be installed in locations with a clear and unobstructed view of the level surface (A):

- Filling inlets creating turbulence (B), and stationary metallic objects with horizontal surfaces (C) should be kept at a distance, outside the signal beam – see tables on page Level-14 for beamwidth information
- Agitators with large horizontal blades may reduce the performance of the transmitter, so install the transmitter in a location where this effect is minimized. Vertical or slanted blades are often invisible to radar, but create turbulence (D)
- Do not install the transmitter in the center of the tank (E)
- Because of circular polarization, there is no clearance distance requirement from the tank wall if it is flat and free from obstructions such as heating coils and ladders (F). Usually, the optimal location is 1/3 of the radius from the tank wall

- The antenna is normally aligned vertically
- A metal bridle / still-pipe can be used to avoid disturbing objects, turbulence, and foam (G)

- The walls in non-metallic tanks are invisible to the radar signal, so nearby objects outside the tank may be detected
- Choose the largest possible antenna diameter for installation. A larger antenna concentrates the radar beam, and will be less susceptible to obstruction interference. It also assures maximum antenna gain
- Multiple 5400 transmitters can be used in the same tank without interfering with each other (H)

NOZZLE CONSIDERATIONS

Special considerations may have to be taken due to the nozzle, depending on the selection of transmitter model and antenna.

5402 with Cone Antenna

The antenna can be recessed in smooth nozzles up to 6 ft (2 m). If the inside of the nozzle contains disturbing objects, use the extended cone (I).

Product Data Sheet

00813-0100-4026, Rev FB

Catalog 2008 - 2009

Rosemount 5400 Series

5402 with Process Seal Antenna

The antenna can be used on nozzles up to 6 ft (2 m), (J), but disturbing objects inside the nozzle (K) may impact the measurement, and should not be used. The flange on the tank should have a flat or raised face. Other tank flanges may be possible, please consult your local Emerson representative for advice.

5401 with Cone Antenna

The antenna should extend 0.4 inches (10 mm), or more, below the nozzle (L). If required, use the extended cone solution.

5401 with Rod Antenna

The active part of the rod antenna should be placed under the nozzle (M).

Still-pipes and Bridles in Metallic Materials

If used correctly, pipe measurement can be advantageous in many applications :

- Use cone or process seal antennas – not the rod antenna.
- The gap between the cone antenna and the still-pipe is limited to 0.2 in. (5 mm). If required, order an oversized antenna and cut on location (N).

Additional information is available in the Reference Manual (00809-0100-4026), or you can contact your local Emerson representative.

Rosemount 5400 Series

Valves

The 5400 Series transmitter can be isolated from the process by using a valve:

- Use a full-port ball valve
- The 5402 is required, and the Process Seal Antenna is the preferred choice, since it does not require a spool piece. The cone antenna can also be used
- Ensure there is no edge between the ball valve and the nozzle / pipe, the inside should be smooth

Valves can be combined with pipes.

Beam Angle and Beamwidth

Comparison between the beam angle and beamwidth for the Rosemount 5401 (~6 GHz) and 5402 (~26 GHz) transmitters with antennas of the same size and type.

Beam Angle for Rosemount 5400 Series

Antenna Size	Beam Angle 5402	Beam Angle 5401
2-in. Cone / Process Seal ⁽¹⁾	19°	—
3-in. Cone / Process Seal ⁽¹⁾	14°	(Pipe only)
4-in. Cone / Process Seal ⁽¹⁾ , Rod ⁽²⁾	9°	37°
6-in. Cone	—	23°
8-in. Cone	—	17°

(1) Only with 5402.

(2) Only with 5401.

Beamwidth at different distances from flange for 5402

Distance	Antenna		
	2-in. Cone / Process Seal	3-in. Cone / Process Seal	4-in. Cone / Process Seal
16 ft (5 m)	4.9 (1.5)	3.3 (1.0)	3.3 (1.0)
33 ft (10 m)	9.8 (3.0)	6.6 (2.0)	4.9 (1.5)
49 ft (15 m)	14.8 (4.5)	9.8 (3.0)	8.2 (2.5)
66 ft (20 m)	19.7 (6.0)	13.1 (4.0)	9.8 (3.0)

Beamwidth at different distances from flange for 5401

Distance	Antenna		
	4-in. Cone / Rod	6-in. Cone	8-in. Cone
16 ft (5 m)	11.5 (3.5)	6.6 (2.0)	4.9 (1.5)
33 ft (10 m)	23.0 (7.0)	13.1 (4.0)	9.8 (3.0)
49 ft (15 m)	32.8 (10)	19.7 (6.0)	14.8 (4.5)
66 ft (20 m)	42.7 (13)	26.2 (8.0)	19.7 (6.0)

For more information, see the Reference Manual (document number 00809-0100-4026).

Specifications

General	
Product	Rosemount 5400 Series Radar Level Transmitter
Measurement Principle	Pulsed, free propagating radar 5402: ~26 GHz 5401: ~6 GHz
Microwave Output Power	< 1 mW
Beam Angle	See table on page 12
Re-calibration	Not required due to self-adjusting electronics.
Measuring Performance	
Maximum Measuring Range	115 ft (35 m) from flange
Instrument Accuracy at reference conditions ⁽¹⁾	5402: ± 0.1 in. (± 3 mm) 5401: ± 0.4 in. (± 10 mm)

 Catalog 2008 - 2009

Rosemount 5400 Series

POWER SUPPLY

4-20 mA with HART® communication

The input voltage U_I for HART® is 16-42.4 V dc (16-30 V dc in IS applications, and 20-42.4 V dc in Explosion-proof / Flameproof applications). Maximum load resistance and power supply limitations for typical operating conditions are given in the diagrams and table below.

Non-Hazardous Installations

R(Ω) Maximum Load Resistance

Intrinsically Safe Installations

R(Ω) Maximum Load Resistance

Explosion-proof / Flameproof Installations

R(Ω) Maximum Load Resistance

NOTE

The diagram is only valid if the HART® load resistance is at the + side and if the - side is grounded, otherwise the load resistance value is limited to 435 Ohm.

Minimum input voltage (U_I) at different currents

Hazardous approval	Current	
	3.75 mA	21.75 mA
Non-Hazardous Installations and Intrinsically Safe Installations	16 V dc	11 V dc
Explosion-proof / Flameproof Installations	20 V dc	15.5 V dc

FOUNDATION™ fieldbus

The input voltage U_I for FOUNDATION™ fieldbus is 9-32 V dc (9-30 V dc in IS applications, 9-17.5 V dc in FISCO applications, and 16-32 V dc in Explosion-proof / Flameproof applications). The quiescent current draw is 21 mA.

TEMPERATURE AND PRESSURE RATINGS

Flange Temperature

The temperature at the flange is limited by the antenna, the tank seal, and O-rings (if applicable). The continuous flange temperature range is presented for each antenna in section "Dimensional Drawings and Mechanical Properties" on page 21.

Temperature rating considerations.

NOTE

Flange temperature depends on process and ambient temperature, and mounting conditions such as nozzle position, distance to max product level, nozzle height, presence of insulation, etc.

Operating Pressure

The pressure in the tank is limited by a combination of the antenna and the process connection.

The following 5400 Series flanges have the same p/T rating as the corresponding blind flanges:

ANSI: according to ANSI B16.5 Table 2-2.3.

EN: according to EN 1092-1 Table 18, material group 13E0.

The continuous operating pressure range is presented for each antenna in section "Dimensional Drawings and Mechanical Properties" on page 21.

Electronics Temperature

There are restrictions on the ambient temperature (see "Specifications" on page Level-16), and the ambient temperature may also be limited by the selected product certificate (see "Product Certifications" on page 19).

Product Certifications

SAFETY NOTE AND SPECIAL CONDITIONS FOR SAFE USE (X-MARKING IN ATEX, IECEx, AND NEPSI CERTIFICATES)

The intrinsically safe circuits do not withstand the 500 V ac test as specified in EN 50020 clause 6.4.12.

Parts of the rod antenna and the process seal antenna are non-conducting and the area of the non-conducting part exceeds the maximum permissible areas for Group IIC according to EN 50014, clause 7.3 (20 cm²) and Category II 1G according to EN 50284, clause 4.4.3 (4 cm²) (20 cm² for zone 1 and 4 cm² for zone 0 according to IEC 60079-0, clause 7.3). Therefore, when the antenna is used in a potentially explosive atmosphere, appropriate measures must be taken to prevent electrostatic discharge.

Impact and friction hazards need to be considered according to EN 50284, clause 4.3.1 (IEC 60079-0, clause 8.1.2) when the transmitter and part of antennas exposed to the exterior atmosphere of the tank is made of light metal alloys, and used in Category II 1 G (zone 0).

Catalog 2008 - 2009

Rosemount 5400 Series

Code	Antenna - Size and Material (for process connection availability, refer to "Dimensional Drawings and Mechanical Properties" on page 21)
Cone Antennas	
2S	2 in. DN 50, 316L SST (EN 1.4404)
3S	3 in. DN 80, 316L SST (EN 1.4404)
4S	4 in. DN 100, 316L SST (EN 1.4404)
2H	2 in. DN 50, Hastelloy® C-276 (UNS N10276) with wetted flange plate
3H	3 in. DN 80, Hastelloy® C-276 (UNS N10276) with wetted flange plate
4H	4 in. DN 100, Hastelloy® C-276 (UNS N10276) with wetted flange plate
2M	2 in. DN 50, Monel® 400 (UNS N04400) with wetted flange plate
3M	3 in. DN 80, Monel® 400 (UNS N04400) with wetted flange plate
4M	4 in. DN 100, Monel® 400 (UNS N04400) with wetted flange plate
2N	2 in. DN 50, 316L SST (EN 1.4404), with wetted flange plate. Complies with guidelines in NACE® MR0175/ISO 15156 and NACE® MR0103.
3N	3 in. DN 80, 316L SST (EN 1.4404), with wetted flange plate. Complies with guidelines in NACE® MR0175/ISO 15156 and NACE® MR0103.
4N	4 in. DN 100, 316L SST (EN 1.4404), with wetted flange plate. Complies with guidelines in NACE® MR0175/ISO 15156 and NACE® MR0103.
Process Seal Antennas	
2P	2 in. DN 50, PTFE
3P	3 in. DN 80, PTFE
4P	4 in. DN 100, PTFE
Other Antennas	
XX	Customer specific
Code	Tank Sealing
PV	PTFE with Viton® fluoroelastomer o-rings
PK	PTFE with Kalrez® 6375 perfluoroelastomer o-rings
PE	PTFE with EPDM o-rings
PB	PTFE with Buna-N o-rings
Code	Process Connection and Material (for antenna availability, refer to "Dimensional Drawings and Mechanical Properties" on page 21)
ANSI Flanges (316 / 316L SST)	
AA	2 inch, 150 lbs
AB	2 inch, 300 lbs
BA	3 inch, 150 lbs
BB	3 inch, 300 lbs
CA	4 inch, 150 lbs
CB	4 inch, 300 lbs
DA	6 inch, 150 lbs
EA	8 inch, 150 lbs
EN (DIN) Flanges (EN 1.4404 SST)	
HB	DN 50 PN 40
IB	DN 80 PN 40
JA	DN 100 PN 16
JB	DN 100 PN 40
KA	DN 150 PN 16
LA	DN 200 PN 16
JIS Flanges (EN 1.4404 SST)	
UA	50A 10K
VA	80A 10K
XA	100A 10K
YA	150A 10K
ZA	200A 10K
Other Flanges	
BR	Bracket Mounting, 316L / EN 1.4404 SST ⁽⁴⁾
XX	Customer specific

Rosemount 5400 Series

Product Data Sheet
00813-0100-4026, Rev FB
Catalog 2008 - 2009

Code	Options
M1	Integral digital display
GC	Transparent meter glass protection cover made of PTFE / FEP
T1	Transient Protection Terminal Block (standard with FISCO options)
Software Configuration	
C1	Factory configuration (CDS required with order)
Alarm Limit Configuration	
C4	NAMUR alarm and saturation levels, high alarm
C8	Low alarm ⁽⁵⁾ (standard Rosemount alarm and saturation levels)
Special Certificates	
N2	Certificate of compliance with guidelines in NACE [®] MR0175/ISO 15156 and NACE [®] MR0103 ⁽⁶⁾
Q4	Calibration Data Certificate
Q8	Material Traceability Certification per EN 10204 3.1 ⁽⁷⁾
Special Procedures	
P1	Hydrostatic testing ⁽⁴⁾
Antenna Modification	
S3 (pending)	Cone antenna extension in 316 / 316L / EN 1.4404 SST. To be used if there are irregularities in the nozzle. Fits nozzles up to 20 in. (500 mm) ⁽⁸⁾ .
Typical Model Number: 5402 A H 1 E5 4S PV CA - M1 C1	

- (1) Options E (eurofast[®]) and M (minifast[®]) are not available with Explosion-proof or Flameproof approvals.
- (2) Requires Foundation™ fieldbus signal output (U_i parameter listed in "Product Certifications" on page 19).
- (3) G ½ in. SST cable gland is included in delivery.
- (4) Bracket mounting (BR) is not available with hydrostatic testing (P1).
- (5) The standard alarm setting is high.
- (6) Requires wetted flange plate cone antennas (2H-4H, 2M-4M, 2N-4N) or process seal antennas (2P-4P).
- (7) Certificate includes all pressure retaining wetted parts.
- (8) Requires a SST cone antenna (2S-4S).

Rosemount 5400 Series

Model Code for Rosemount 5401 Radar Level Transmitter

Model	Product Description
5401	Low frequency version (~6 GHz)
Code	Housing Material
A	Polyurethane-covered Aluminum
Code	Signal Output
H	4-20 mA with HART® communication
F	FOUNDATION™ fieldbus
Code	Conduit / Cable Threads
1	1/2 inch - 14 NPT
2	M20 x 1.5 adapter
E	M12, 4-pin, Male Connector (eurofast®)(1)
M	A size Mini, 4-pin, Male Connector (minifast®)(1)
Code	Product Certifications
NA	No Product Certificates
E1	ATEX Flameproof(1)
I1	ATEX Intrinsic Safety
IA	ATEX FISCO Intrinsic Safety(2)
E3	NEPSI Flameproof(1)
I3	NEPSI Intrinsic Safety
IC	NEPSI FISCO Intrinsic Safety
E4	TIIS Flameproof(3)
E5	FM Explosion-proof(1)
I5	FM Intrinsic Safety and Non-incendive
IE	FM FISCO Intrinsic Safety(2)
E6	CSA Explosion-proof(1)
I6	CSA Intrinsic Safety
IF	CSA FISCO Intrinsic Safety(2)
E7	IECEX Flameproof(1)
I7	IECEX Intrinsic Safety
IG	IECEX FISCO Intrinsic Safety(2)

3H	3 in. DN 80, Hastelloy [®] C-276 (UNS N10276) with wetted flange plate, pipe installations only
4H	4 in. DN 100, Hastelloy [®] C-276 (UNS N10276) with wetted flange plate
6H	6 in. DN 150, Hastelloy [®] C-276 (UNS N10276) with wetted flange plate
8H	8 in. DN 200, Hastelloy [®] C-276 (UNS N10276) with wetted flange plate
3M	3 in. DN 80, Monel [®] 400 (UNS N04400) with wetted flange plate, pipe installations only
4M	4 in. DN 100, Monel [®] 400 (UNS N04400) with wetted flange plate
6M	6 in. DN 150, Monel [®] 400 (UNS N04400) with wetted flange plate
8M	8 in. DN 200, Monel [®] 400 (UNS N04400) with wetted flange plate
3N	3 in. DN 80, 316L SST (EN 1.4404), with wetted flange plate, pipe installations only. Complies with guidelines in NACE [®] MR0175/ISO 15156 and NACE [®] MR0103.
4N	4 in. DN 100, 316L SST (EN 1.4404), with wetted flange plate. Complies with guidelines in NACE [®] MR0175/ISO 15156 and NACE [®] MR0103.
6N	6 in. DN 150, 316L SST (EN 1.4404), with wetted flange plate. Complies with guidelines in NACE [®] MR0175/ISO 15156 and NACE [®] MR0103.
8N	8 in. DN 200, 316L SST (EN 1.4404), with wetted flange plate. Complies with guidelines in NACE [®] MR0175/ISO 15156 and NACE [®] MR0103.
Rod Antennas	
1R	Short version, all-PFA ⁽⁴⁾⁽⁵⁾ , with wetted flange plate, max. nozzle height 4 in. (100 mm), free propagation only
2R	Long version, all-PFA ⁽⁴⁾⁽⁵⁾ , with wetted flange plate, max. nozzle height 10 in. (250 mm), free propagation only
3R	Short version, SST+PFA ⁽⁴⁾ , max. nozzle height 4 in. (100 mm), free propagation only
4R	Long version, SST+PFA ⁽⁴⁾ , max. nozzle height 10 in. (250 mm), free propagation only
Other Antennas

Antenna Modification	
S3	Extended Cone Antenna in 316 / 316L / EN 1.4404 SST. Maximum recommended nozzle height is 20 in. (500 mm). ⁽¹⁰⁾
Typical Model Number: 5401 A H 1 NA 4S PV CA - M1 C1	

- (1) Options E (eurofast[®]) and M (minifast[®]) are not available with Explosion-proof or Flameproof approvals.
- (2) Requires Foundation™ fieldbus signal output (U₁ parameter listed in "Product Certifications" on page 19).
- (3) G ½ in. SST cable gland is included in delivery.
- (4) PFA is a fluoropolymer with properties similar to PTFE.
- (5) All-PFA Rod antennas (1R or 2R) require all-PFA tank seal (PD).
- (6) Certain process connections are not available with hydrostatic testing (P1).
- (7) The standard alarm setting is high.
- (8) Requires wetted flange plate cone antennas (3H-8H, 3M-8M, 3N-8N) or rod antennas (1R-4R).
- (9) Certificate includes all pressure retaining wetted parts.
- (10) Requires a SST cone antenna (3S-8S).
