Rosemount 8800D

# Rosemount 8800D Series Vortex Flowmeter

### HART® AND FOUNDATION™ FIELDBUS PROTOCOLS

- Available with optional MultiVariable output and temperature compensated mass flow for saturated steam.
- Available in wafer, flanged, dual, reducer and high pressure designs.
- Available in Reducer™ Vortex which extends the measurable flow range, reduces installation costs, and minimizes project risk.
- All-welded, non-clog design eliminates ports and gaskets.
- Adaptive Digital Signal Processing (ADSP) provides vibration immunity and the ability to optimize the measurable flow range.
- With the unique isolated sensor design, the CriticalProcess™ Vortex allows for replacement without breaking the process seal.
- Simplified troubleshooting through device diagnostics and meter verification.

# Rosemount 8800D

## THE ROSEMOUNT 8800D DELIVERS RELIABILITY

- **Rosemount Reliability** - The 8800D Vortex eliminates impulse lines, ports, and gaskets to improve reliability.
- **Non-clog Design** - Unique gasket-free construction which has no ports that can clog.
- **Vibration Immunity** - Mass Balancing of the sensor system, and Adaptive Digital Signal Processing (ADSP) provide Vibration immunity.
- **Replaceable Sensor** - The sensor is isolated from the process and can be replaced without breaking the process seals. All line sizes use the same sensor design allowing a single spare to serve every meter. The CriticalProcess Vortex enhances the ability to replace the sensor without shutting down the process.
- **Simplified Troubleshooting** - Device Diagnostics enable field verification of Meter Electronics and Sensor with no process shutdown.

## THE ROSEMOUNT 8800D OFFERING

- The 8800D is available in wafer style meter bodies for 1/2 through 8-in. line sizes, and ASME B16.5 (ANSI), DIN, or JIS flanged style meter bodies for 1/2 through 12-in. line sizes.
- Alignment rings, provided with each wafer-style flowmeter, ensure that the meter body is properly centered with the adjacent piping.
- The wafer, flanged, and weld end style meter bodies are available in 316 stainless steel and nickel alloy materials of construction.
- Available up to ASME class 1500 for 1 through 8-in. (25 mm through 200 mm) and ASME class 900 for 1/2-in. (15 mm) through 8-in. (200 mm).
- Available with FOUNDATION fieldbus functionality which includes Device Diagnostics and PlantWeb Alerts.

# Rosemount 8800D

## THE ROSEMOUNT 8800DR REDUCER VORTEX EXTENDS THE MEASURABLE FLOW RANGE AT A REDUCED COST

- **Rosemount Reliability** - Designed with same electronics, sensor, and meter body as the 8800D.
- **Reduced Cost** - Eliminates field assembly and welding of separate reducers and piping reducing installed cost by as much as 50%.
- **Extended Measurable Flow** - Low-end flow range is doubled with the Rosemount 8800DR Reducer Vortex.
- **Reduced Project Risk** - Reducer Vortex and the Standard Vortex have the same face-to-face dimension. As a result either meter can be used without affecting pipe layout.
- Available as flanged meter for 1 through 12-in. stainless steel and nickel alloy materials of construction.
- Available with FOUNDATION fieldbus functionality.

## THE DUAL-SENSOR VORTEX FLOWMETER

- **Safety Integrated Systems (SIS)** - Ideal solution where redundant flow signals are required.
- **Rosemount Reliability** - Designed with same electronics, sensor, and meter body as the 8800D.
- **Redundant Flow Measurement** - Dual Vortex meter is constructed of two complete vortex meters: sensor, electronics, and shedder bar<sup>(1)</sup>. The meters are welded together and flow calibrated to provide an accurate single flowmeter with two independent flow measurements.
- Available as flanged meter for 1/2 through 12-in. stainless steel and nickel alloy materials of construction.

(1) All 6-in. (150 mm) through 12-in. (300 mm) dual style vortex meters have a single shedder bar.

# Rosemount 8800D

## 8800D MULTIVARIABLE VORTEX REDUCES INSTALLATION COSTS, SIMPLIFIES INSTALLATION, AND IMPROVES PERFORMANCE IN SATURATED STEAM

- **MultiVariable Vortex Design**  
Incorporates temperature sensor into the vortex meter using the shudder bar as a thermowell, which keeps the vortex and temperature sensors isolated from process for easy verification and replacement.
- **Temperature Compensated Capability for Saturated Steam**  
Calculates density from measured process temperature and uses the calculated density to provide a temperature compensated mass flow.
- **Increased performance in Saturated Steam**  
Performance in saturated steam is improved due to the fact that the electronics will be compensating for changes in the process temperature.
- **Reduces Installed Costs**  
MultiVariable Vortex eliminates the need for an external thermowell and temperature sensor.
- **Output Options**  
Can map independent variables to analog output, pulse output, or HART burst variables.
- **Available with Flow Computer for additional functionality**  
Integrate the MultiVariable Vortex with a pressure transmitter for full pressure and temperature compensation of superheated steam and various gases.
- **Remote Mount Electronics**  
Also available with remote mounted electronics up to 75 ft. (23 m).

When you integrate the MultiVariable Vortex with a Rosemount Flow Computer, you get:

- Remote Communications
- Heat Calculations
- Remote Totalization
- Peak Demand Calculation
- Datalogging Capabilities

Please see Product Data Sheet 00813-0100-4005 for more information on the Rosemount Flow Computer.

## ROSEMOUNT 8800D VORTEX FLOWMETER WITH FOUNDATION FIELDBUS

The software for the 8800D Flowmeter with FOUNDATION fieldbus permits remote testing and configuration using any FOUNDATION fieldbus-compliant host, such as the DeltaV system from Emerson Process Management.

### Transducer Block

The transducer block calculates flow from sensor frequency. The calculation includes information about damping, shedding frequency, K-factor, process fluid, pipe ID, and diagnostics.

### Resource Block

The resource block contains physical transmitter information, including available memory, manufacturer identification, device type, software tag, and unique identification.

### Backup Link Active Scheduler (LAS)

The transmitter is classified as a device link master. A device link master can function as a Link Active Scheduler (LAS) if the current link master device fails or is removed from the segment.

The host or other configuration tool is used to download the schedule for the application to the link master device. In the absence of a primary link master, the transmitter will claim the LAS and provide permanent control for the H1 segment.

### Diagnostics

The transmitter automatically performs continuous self-diagnostics. The user can perform on-line testing of the transmitter digital signal. Advanced simulation diagnostics are available. This enables remote verification of the electronics via a flow signal generator built into the electronics. The sensor strength value can be used to view the process flow signal and provide information regarding filter settings.

## FOUNDATION Fieldbus Function Blocks

### Analog Input

The AI function block processes the measurement and makes it available to other function blocks. The AI function block also allows filtering, alarming, and engineering unit changes.

The 8800D Flowmeter with FOUNDATION fieldbus comes standard with three AI function blocks (1 block for flow, 1 block for signal strength, and one block for future use with the MTA option).

### Proportional/Integral/Derivative

The optional PID function block provides a sophisticated implementation of the universal PID algorithm. The PID function block features input for feed forward control, alarms on the process variable, and control deviation. The PID type (series or Instrument Society of America [ISA]) is user-selectable on the derivative filter.

### Integrator

The standard integrator block is available for totalization of flow.

### Setup

Basic setup requires connecting the transmitter to a fieldbus network or Field Communicator. The FOUNDATION fieldbus-compliant host will automatically establish communication with the device.

The Rosemount 8800D Flowmeter can be easily configured using the DeltaV system.

User-configurable parameters include: tag, scaling and units, process fluid type, damping, fixed process density, pipe inside diameter (ID)<sup>(1)</sup>, and fixed process temperature<sup>(1)</sup>.

Tagging information can be entered into the transmitter to allow identification and a physical description. 32-character tags are provided for identification of the transmitter and each function block.

(1) Process temperature and pipe ID have known effects on the K-factor. The 8800D software automatically accounts for these effects by compensating the K-factor.

# Rosemount 8800D

## Specifications

The following specifications are for the Rosemount 8800D, Rosemount 8800DR, and Rosemount 8800DD, except where noted.

### FUNCTIONAL SPECIFICATIONS

#### Process Fluids

Liquid, gas, and steam applications. Fluids must be homogeneous and single-phase.

#### Line Sizes

##### Wafer

$\frac{1}{2}$ , 1,  $1\frac{1}{2}$ , 2, 3, 4, 6, and 8 inches  
(DN 15, 25, 40, 50, 80, 100, 150, and 200)

##### Flanged and Dual-Sensor Style

$\frac{1}{2}$ , 1,  $1\frac{1}{2}$ , 2, 3, 4, 6, 8, 10, and 12 inches  
(DN 15, 25, 40, 50, 80, 100, 150, 200, 250, and 300)

##### Reducer

1,  $1\frac{1}{2}$ , 2, 3, 4, 6, 8, 10, and 12 inches  
(DN 25, 40, 50, 80, 100, 150, 200, 250, and 300)

#### Pipe Schedules

Process piping Schedules 10, 40, 80, and 160.

#### NOTE

The appropriate bore diameter of the process piping must be entered using the Field Communicator or AMS Device Manager. Meters will be shipped from the factory at the Schedule 40 default value unless otherwise specified.

#### Measurable Flow Rates

Capable of processing signals from flow applications which meet the sizing requirements below.

To determine the appropriate flowmeter size for an application, process conditions must be within the Reynolds number and velocity limitations for the desired line size provided in Table 1, Table 2, and Table 3.

#### NOTE

Consult your local sales representative to obtain a computer sizing program that describes in greater detail how to specify the correct flowmeter size for an application.

The Reynolds number equation shown below combines the effects of density ( $\rho$ ), viscosity ( $\mu_{cp}$ ), pipe inside diameter ( $D$ ), and flow velocity ( $V$ ).

$$R_D = \frac{VD\rho}{\mu_{cp}}$$

Table 1. Minimum Measurable Meter Reynolds Numbers

Meter Sizes (Inches / DN)	Reynolds Number Limitations
$\frac{1}{2}$ through 4	15 through 100
15 through 300	5000 minimum

Table 2. Minimum Measurable Meter Velocities<sup>(1)</sup>

	Feet per Second	Meters per Second
Liquids <sup>(2)</sup>	$\sqrt{36/\rho}$	$\sqrt{54/\rho}$
Gases <sup>(2)</sup>	$\sqrt{36/\rho}$	$\sqrt{54/\rho}$

The  $\rho$  is the process fluid density at flowing conditions in lb/ft<sup>3</sup> for ft/s and kg/m<sup>3</sup> for m/s

(1) Velocities are referenced to schedule 40 pipe.

(2) This minimum measurable meter velocity is based on default filter settings.

Table 3. Maximum Measurable Meter Velocities<sup>(1)</sup>  
(Use the smaller of the two values)

	Feet per Second	Meters per Second
Liquids	$\sqrt{90,000/\rho}$ or 25	$\sqrt{134,000/\rho}$ or 7.6
Gases <sup>(2)</sup>	$\sqrt{90,000/\rho}$ or 250	$\sqrt{134,000/\rho}$ or 76

The  $\rho$  is the process fluid density at flowing conditions in lb/ft<sup>3</sup> for ft/s and kg/m<sup>3</sup> for m/s

(1) Velocities are referenced to schedule 40 pipe.

(2) Accuracy limitations for gas and steam for Dual-style meters  
( $\frac{1}{2}$ -in. to 4-in.): max velocity of 100 ft/s (30.5 m/s).

# Product Data Sheet

00813-0100-4004, Rev HA

April 2010

# Rosemount 8800D

## Process Temperature Limits

### Standard

-40 to 450 °F (-40 to 232 °C)

### Extended

-330 to 800 °F (-200 to 427 °C)

### MultiVariable (MTA option)

-40 to 800 °F (-40 to 427 °C)

- Use above 450 °F (232 °C) requires Extended Sensor

## Output Signals

### 4–20 mA Digital HART Signal

Superimposed on 4–20 mA signal

### Optional Scalable Pulse Output

0 to 10000 Hz; transistor switch closure with adjustable scaling via HART communications; capable of switching up to 30 Vdc, 120 mA maximum

### Digital FOUNDATION fieldbus signal

Completely digital output with FOUNDATION fieldbus communication (ITK 5.1 compliant).

## Analog Output Adjustment

Engineering units and lower and upper range values are user-selected. Output is automatically scaled to provide 4 mA at the selected lower range value, 20 mA at the selected upper range value. No frequency input is required to adjust the range values.

## Scalable Frequency Adjustment

The scalable pulse output can be set to a specific velocity, volume, or mass (i.e. 1 pulse = 1 lb). The scalable pulse output can also be scaled to a specific rate of volume, mass, or velocity (i.e. 100 Hz = 500 lb/hr).

## Ambient Temperature Limits

### Operating

-58 to 185 °F (-50 to 85 °C)

-4 to 185 °F (-20 to 85 °C) for flowmeters with local indicator

### Storage

-58 to 250 °F (-50 to 121 °C)

-50 to 185 °F (-46 to 85 °C) for flowmeters with local indicator

## Pressure Limits

### Flange Style Meter

Rated for ASME B16.5 (ANSI) Class 150, 300, 600, 900, and 1500, DIN PN 10, 16, 25, 40, 64, 100, and 160, and JIS 10K, 20K, and 40K

### Reducer Style Meter

Rated for ASME B16.5 (ANSI) Class 150, 300, 600, and 900, DIN PN 10, 16, 25, 40, 64, 100, and 160.

### Dual Sensor Style Meter

Rated for ASME B16.5 (ANSI) Class 150, 300, 600, 900, and 1500, DIN PN 10, 16, 25, 40, 64, 100, and 160, and JIS 10K, 20K, and 40K

### Wafer Style Meter

Rated for ASME B16.5 (ANSI) Class 150, 300, and 600, DIN PN 10, 16, 25, 40, 64, and 100, and JIS 10K, 20K, and 40K

## NOTE:

All Wafer Style Meters are pressure rated and labeled at 1500 PSI / 10.34 MPa at 100 °F / 38 °C regardless of Alignment Ring Size code ordered.

### Weld-End Style Meter

W1 Welds to Schedule 10 mating pipe  
Max Working Pressure 720 psig (4.96 MPa-g)

W4 Welds to Schedule 40 mating pipe  
Max Working Pressure 1440 psig (9.93 MPa-g)

W8 Welds to Schedule 80 mating pipe  
Max Working Pressure 2160 psig (14.9 MPa-g)

W9 Welds to Schedule 160 mating pipe  
Max Working Pressure 3600 psig (24.8 Mpa-g)

## NOTE:

1-in. (25 mm), and 1.5-in. (40 mm) weld to Schedule 80 mating pipe

## Power Supply

### HART Analog

External power supply required. Flowmeter operates on 10.8 to 42 Vdc terminal voltage (with 250-ohm minimum load required for HART communications, 16.8 Vdc power supply is required)

### FOUNDATION fieldbus

External power supply required. Flowmeter operates on 9 to 32 Vdc, 18 mA maximum.

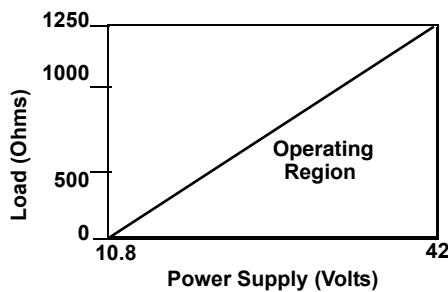

# Rosemount 8800D

## Power Consumption

One watt maximum

## Load Limitations (HART Analog)

Maximum loop resistance is determined by the voltage level of the external power supply, as described by:

$$\begin{aligned} R_{\max} &= 41.7(V_{ps} - 10.8) \\ V_{ps} &= \text{Power Supply Voltage (Volts)} \\ R_{\max} &= \text{Maximum Loop Resistance (Ohms)} \end{aligned}$$

## NOTE

HART Communication requires a minimum loop resistance of 250 ohms.

## Optional LCD Indicator

The optional LCD indicator is capable of displaying:

- Primary Variable
- Velocity Flow
- Volumetric Flow
- Mass Flow
- Percent of Range
- Analog Output (if applicable)
- Totalizer (Output Code "D" and "P" Only)
- Shedding Frequency
- Pulse Output Frequency (if applicable)
- Electronics Temperature (Output Code "D" and "P" Only)
- Process Temperature (MTA Option Only)
- Calculated Process Density (MTA Option Only)

If more than one item is selected, the display will scroll through all items selected.

## Enclosure Rating

FM Type 4X; CSA Type 4X; IP66

## Permanent Pressure Loss

The approximate permanent pressure loss (PPL) from the Rosemount 8800D flowmeter is calculated for each application in the Vortex sizing software available from your local Rosemount representative. The PPL is determined using the equation:

$$PPL = \frac{A \times \rho_f \times Q^2}{D^4}$$

where:

PPL = Permanent Pressure loss (psi or kPa)

Where:

$\rho_f$  = Density at operating conditions ( $\text{lb}/\text{ft}^3$  or  $\text{kg}/\text{m}^3$ )

Q = Actual volumetric flow rate (Gas =  $\text{ft}^3/\text{min}$  or  $\text{m}^3/\text{hr}$ ; Liquid = gal/min or l/min)

D = Flowmeter bore diameter (in. or mm)

A = Constant depending on meter style, fluid type and flow units. Determined per following table:

Table 4. Determining the PPL

Meter Style	English Units		SI Units	
	A <sub>Liquid</sub>	A <sub>Gas</sub>	A <sub>Liquid</sub>	A <sub>Gas</sub>
8800DF/W	$3.4 \times 10^{-5}$	$1.9 \times 10^{-3}$	0.425	118
8800DR	$3.91 \times 10^{-5}$	$2.19 \times 10^{-3}$	0.489	136
8800DD <sup>(1)</sup>	$6.12 \times 10^{-5}$	$3.42 \times 10^{-3}$	0.765	212

(1) For all 6-in. thru 12-in. line sizes A is the same for 8800DD and 8800DF

## Minimum Upstream Pressure (Liquids)

Flow metering conditions that would allow cavitation, the release of vapor from a liquid, should be avoided. This flow condition can be avoided by remaining within the proper flow range of the meter and by following appropriate system design.

For some liquid applications, incorporation of a back pressure valve should be considered. To prevent cavitation, the minimum upstream pressure should be:

$$P = 2.9 * \Delta P + 1.3 * p_v \text{ or } P = 2.9 * \Delta P + p_v + 0.5 \text{ psia} \quad (3.45 \text{ kPa}) \text{ (use the smaller of the two results)}$$

P = Line pressure five pipe diameters downstream of the meter (psia or kPa abs)

$\Delta P$  = Pressure loss across the meter (psi or kPa)

$p_v$  = Liquid vapor pressure at operating conditions (psia or kPa abs)

# Product Data Sheet

00813-0100-4004, Rev HA

April 2010

# Rosemount 8800D

## Failure Mode Alarm

### HART Analog

If self-diagnostics detect a gross flowmeter failure, the analog signal will be driven to the values below:

Low	3.75
High	22.6
NAMUR Low	3.60
NAMUR High	22.6

High or low alarm signal is user-selectable through the fail mode alarm jumper on the electronics. NAMUR-compliant alarm limits are available through the C4 or CN Option. Alarm type is field configurable also.

### FOUNDATION fieldbus

The AI block allows the user to configure the alarm to HI-HI, HI, LO, or LO-LO with a variety of priority levels.

## Saturation Output Values

When the operating flow is outside the range points, the analog output continues to track the operating flow until reaching the saturation value listed below; the output does not exceed the listed saturation value regardless of the operating flow. The NAMUR-Compliant Saturation Values are available through the C4 or CN option. Saturation type is field configurable.

Low	3.9
High	20.8
NAMUR Low	3.8
NAMUR High	20.5

## Damping

Flow Damping adjustable between 0.2 and 255 seconds.

Process Temperature Damping adjustable between 0.4 and 32.0 seconds (MTA Option Only).

## Response Time

Three vortex shedding cycles or 300 ms, whichever is greater, maximum required to reach 63.2% of actual input with the minimum damping (0.2 seconds).

## Turn-on Time

### HART Analog

Less than four (4) seconds plus the response time to rated accuracy from power up (less than 7 seconds with the MTA Option).

### FOUNDATION fieldbus

Performance within specifications no greater than 10.0 seconds after power is applied.

## Transient Protection

The optional transient terminal block prevents damage to the flowmeter from transients induced by lightning, welding, heavy electrical equipment, or switch gears. The transient protection electronics are located in the terminal block.

The transient terminal block meets the following specifications:

ASME B16.5 (ANSI)/IEEE C62.41 - 1980

(IEEE 587) Categories A, B

3 kA crest ( $8 \times 20 \mu\text{s}$ )

6 kV crest ( $1.2 \times 50 \mu\text{s}$ )

6 kV/0.5 kA (0.5  $\mu\text{s}$ , 100 kHz, ring wave)

## Security Lockout

When the security lockout jumper is enabled, the electronics will not allow you to modify parameters that affect flowmeter output.

## Output Testing

### Current Source

Flowmeter may be commanded to set the current to a specified value between 4 and 20 mA.

### Frequency Source

Flowmeter may be commanded to set the frequency to a specified value between 0 and 10000 Hz.

## Low Flow Cutoff

Adjustable over entire flow range. Below selected value, output is driven to 4 mA and zero pulse output frequency.

## Humidity Limits

Operates in 0–95% relative humidity under noncondensing conditions (tested to IEC 60770, Section 6.2.11).

## Overrange Capability

### HART Analog

Analog signal output continues to 105 percent of span, then remains constant with increasing flow. The digital and pulse outputs will continue to indicate flow up to the upper sensor limit of the flowmeter and a maximum pulse output frequency of 10400 Hz.

# Rosemount 8800D

## FOUNDATION fieldbus

For liquid process fluid type, the transducer block digital output will continue to a nominal value of 25 ft/s. After that, the status associated with the transducer block output will go to UNCERTAIN. Above a nominal value of 30 ft/s, the status will go to BAD.

For gas/steam service, the transducer block digital output will continue to a nominal value of 220 ft/s for 0.5 and 1.0-in. line sizes and a nominal value of 250 ft/s for 1.5–12-in. line sizes. After that, the status associated with the transducer block output will go to UNCERTAIN. Above a nominal value of 300 ft/s for all line sizes, the status will go to BAD.

## Flow Calibration

Meter bodies are flow-calibrated and assigned a unique calibration factor (K-factor) at the factory. The calibration factor is entered into the electronics, enabling interchangeability of electronics and/or sensors without calculations or compromise in accuracy of the calibrated meter body.

## Status (FOUNDATION fieldbus only)

If self-diagnostics detect a transmitter failure, the status of the measurement will inform the control system. Status may also set the PID output to a safe value.

## Schedule Entries (FOUNDATION fieldbus only)

Six (6)

## Links (FOUNDATION fieldbus only)

Twelve (12)

## Virtual Communications Relationships (VCRs) (FOUNDATION fieldbus only)

Two (2) predefined (F6, F7)

Four (4) configured (see Table 5)

Table 5. Block Information

Block	Base Index	Execution Time (Milliseconds)
Resource (RB)	300	—
Transducer (TB)	400	—
Analog Input (AI)	1,000	20
Proportional/ Integral/Derivative (PID)	10,000	30
Integrator (INT)	12,000	20

## NOTES

The Rosemount 8800D measures the volumetric flow under operating conditions (i.e. the actual volume at the operating pressure and temperature—acfm or acmh), as shown above. However, gas volumes are strongly dependent on pressure and temperature. Therefore, gas quantities are typically stated in standard or normal conditions (e.g. SCFM or NCMH). (Standard conditions are typically 59 °F and 14.7 psia. Normal conditions are typically 0 °C and 1 bar abs.)

The flow rate limits in standard conditions are found using the equations below:

$$\text{Standard Flow Rate} = \text{Actual Flow Rate} \times \text{Density Ratio}$$

$$\text{Density Ratio} = \text{Density at Actual (Operating) Conditions} / \text{Density at Standard Conditions}$$

# Rosemount 8800D

## PERFORMANCE SPECIFICATIONS

The following performance specifications are for all Rosemount models except where noted. Digital performance specifications applicable to both Digital HART and FOUNDATION fieldbus output.

### Flow Accuracy

Includes linearity, hysteresis, and repeatability.

#### Liquids - for Reynolds Numbers over 20000

##### Digital and Pulse Output

$\pm 0.65\%$  of rate

Note: The accuracy for the 8800DR, line sizes 6 to 12-in. (150 to 300mm), is  $\pm 1.0\%$  of rate.

##### Analog Output

Same as pulse output plus an additional 0.025% of span

#### Gas and Steam - for Reynolds Numbers over 15,000

##### Digital and Pulse Output

$\pm 1.0\%$  of rate

Note: The accuracy for the 8800DR, line sizes 6 to 12-in. (150 to 300mm), is  $\pm 1.35\%$  of rate.

##### Analog Output

Same as pulse output plus an additional 0.025% of span

#### Accuracy limitations for gas and steam:

For 1/2 and 1-in. (DN 15 and DN 25): max velocity of 220 ft/s (67.06 m/s)

For 1/2 to 4-in. (DN 15 to DN 200) Dual-style meters: max velocity of 100 ft/s (30.5 m/s)

#### NOTE

As the meter Reynolds Numbers decreases below the stated limit to 10,000 the accuracy error band will increase linearly to +/- 2.0%. For Reynolds Numbers down to 5,000 the accuracy error band will increase linearly from +/- 2.0% to +/- 6.0%.

#### Process Temperature Accuracy

2.2 °F (1.2 °C) or 0.4% of reading (in °C), whichever is greater.

#### NOTE

For remote mount installations, add  $\pm 0.018\text{ }^{\circ}\text{F}/\text{ft}$ . ( $\pm 0.03\text{ }^{\circ}\text{C}/\text{m}$ ) of uncertainty to the temperature measurement.

## Mass Flow Accuracy for Temperature Compensated Mass Flow

### Digital and Pulse Output

$\pm 2.0\%$  of rate (Nominal)

Nominal conditions include temperature variation in saturation and superheat at 150 psig (10 bar-g) and above.

For pressure below 150 psig (10 bar-g), add 0.08% of uncertainty for every 15 psi (1 bar) below 150 psig (10 bar-g).

### Analog Output

Same as pulse output plus an additional 0.025% of span

### Repeatability

$\pm 0.1\%$  of actual flow rate

### Stability

$\pm 0.1\%$  of rate over one year

### Process Temperature Effect

Automatic K-factor correction with user-entered process temperature.

Table 18 indicates the percent change in K-factor per 100 °F (55.5 °C) in process temperature from reference temperature of 77 °F (25 °C).

Table 18. Process Temperature Effect

Material	Percent Change in K-Factor per 100 °F (55.5 °C)
316L @ < 77 °F (25 °C)	+ 0.23
316L @ > 77 °F (25 °C)	- 0.27
Nickel Alloy C < 77 °F (25 °C)	+ 0.22
Nickel Alloy C > 77 °F (25 °C)	- 0.22

### Ambient Temperature Effect

#### Digital and Pulse Outputs

No effect

#### Analog Output

$\pm 0.1\%$  of span from -58 to 185 °F (-50 to 85 °C)

April 2010

# Rosemount 8800D

## Vibration Effect

An output with no process flow may be detected if sufficiently high vibration is present.

The meter design will minimize this effect, and the factory settings for signal processing are selected to eliminate these errors for most applications.

If an output error at zero flow is still detected, it can be eliminated by adjusting the low flow cutoff, trigger level, or low-pass filter.

As the process begins to flow through the meter, most vibration effects are quickly overcome by the flow signal.

## Vibration Specifications

### Integral Aluminum Housings, Remote Aluminum Housings, and Remote SST Housings

At or near the minimum liquid flow rate in a normal pipe mounted installation, the maximum vibration should be 0.087-in. (2,21 mm) double amplitude displacement or 1 g acceleration, whichever is smaller. At or near the minimum gas flow rate in a normal pipe mounted installation, the maximum vibration should be 0.043-in. (1,09 mm) double amplitude displacement or  $\frac{1}{2}$  g acceleration, whichever is smaller.

### Integral SST Housing

At or near the minimum liquid flow rate in a normal pipe mounted installation, the maximum vibration should be 0.044-in. (1,11 mm) double amplitude displacement or  $\frac{1}{3}$  g acceleration, whichever is smaller. At or near the minimum gas flow rate in a normal pipe mounted installation, the maximum vibration should be 0.022-in. (0,55 mm) double amplitude displacement or  $\frac{1}{6}$  g acceleration, whichever is smaller.

## Mounting Position Effect

Meter will meet accuracy specifications when mounted in horizontal, vertical, or inclined pipelines. Best practice for mounting in a horizontal pipe is to orient the shedder bar in the horizontal plane. This will prevent solids in liquid applications and liquid in gas/steam applications from disrupting the shedding frequency.

## EMI/RFI Effect

Meets EMC requirements to EU Directive 2004/108/EC.

### HART Analog

Output error less than  $\pm 0.025\%$  of span with twisted pair from 80-1000 MHz for radiated field strength of 10 V/m. Tested per EN61326.

### FOUNDATION fieldbus and Digital HART

No affect on the values that are being given if using HART digital signal or FOUNDATION fieldbus. Tested per EN61326.

## Magnetic-Field Interference

### HART Analog

Output error less than  $\pm 0.025\%$  of span at 30 A/m (rms).

### FOUNDATION fieldbus

No effect on digital output accuracy at 30 A/m (rms). Tested per EN 61326.

## Series Mode Noise Rejection

### HART Analog

Output error less than  $\pm 0.025\%$  of span at 1 V rms, 60 Hz.

### FOUNDATION fieldbus

No effect on digital output accuracy at 1 V rms, 60 Hz.

## Common Mode Noise Rejection

### HART Analog

Output error less than  $\pm 0.025\%$  of span at 30 V rms, 60 Hz.

### FOUNDATION fieldbus

No effect on digital output accuracy at 250 V rms, 60 Hz.

## Power Supply Effect

### HART Analog

Less than 0.005% of span per volt

### FOUNDATION fieldbus

No effect on accuracy.

# Rosemount 8800D

## PHYSICAL SPECIFICATIONS

### NACE Compliance

Materials of Construction meet NACE material recommendations per MR0175/ISO15156 for use in H<sub>2</sub>S containing environments in oil field production. Materials of construction also meet NACE recommendations per MR0103-2003 for corrosive petroleum refining environments. MR0103 compliance requires Q25 option in model code.

### NOTE:

Certificate of compliance for MR0175/ISO15156 requires Q15 as a separate line item.

### Electrical Connections

1/2 –14 NPT, PG 13.5, or M20 × 1.5 conduit threads; screw terminals provided for 4–20 mA and pulse output connections; communicator connections permanently fixed to terminal block.

### Non-Wetted Materials

#### Housing

Low-copper aluminum (FM Type 4X, CSA Type 4X, IP66)  
Optional SST housing

#### Paint

Polyurethane

#### Cover O-rings

Buna-N

#### Flanges

316/316L lap joint

#### Temperature Sensor (MTA Option)

Type-N Thermocouple

### Process-Wetted Materials

#### Meter Body

316L wrought stainless and CF-3M cast stainless or N06022 wrought Nickel Alloy and CW2M cast Nickel Alloy. Other material grades available. Consult factory for other materials of construction.

#### Flanges

316/316L stainless steel  
Nickel Alloy N06022 Weld Neck

### Collars

Nickel Alloy N06022  
316/316L Stainless Steel

#### Surface Finish of Flanges and Collars

Standard: To the requirements of the applicable flange standard.

Smooth: 63 to 125  $\mu$  inches  
(1.6 to 3.1  $\mu$  meters) Ra roughness

### Process Connections

Mounts between the following flange configurations:

ASME B16.5 (ANSI): Class 150, 300, 600, 900, 1500

DIN: PN 10, 16, 25, 40, 64, 100, 160

JIS: 10K, 20K, and 40K

Weld-end: Schedule 10, Schedule 40, Schedule 80, Schedule 160

### Mounting

#### Integral (Standard)

Electronics are mounted on meter body.

#### Remote (Optional)

Electronics may be mounted remote from the meter body. Interconnecting coaxial cable available in nonadjustable 10, 20, and 30 ft (3.0, 6.1, and 9.1 m) lengths. Consult factory for non-standard lengths up to 75 ft (22.9 m). Remote mounting hardware includes a pipe mount bracket with one u-bolt.

## Product Data Sheet

00813-0100-4004, Rev HA

April 2010

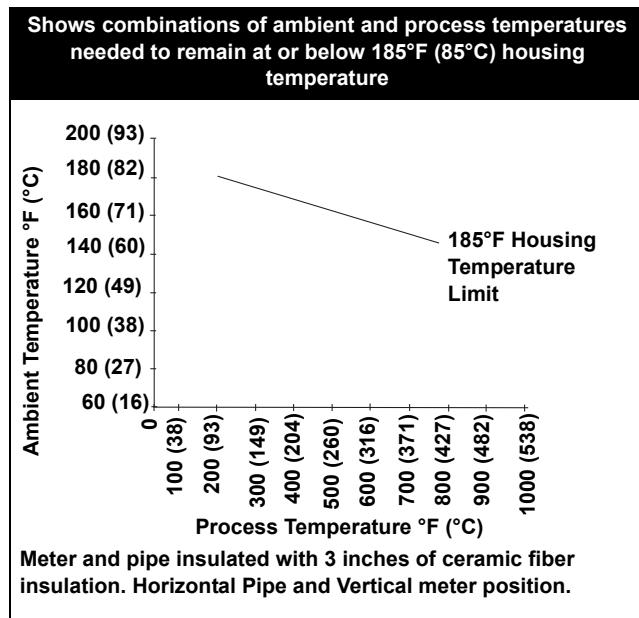

# Rosemount 8800D

### Temperature Limitations for Integral Mounting

The maximum process temperature for integral mount electronics is dependent on the ambient temperature where the meter is installed. The electronics must not exceed 185°F (85°C). The following is for reference, please note that the pipe was insulated with 3 inches of ceramic fiber insulator.

Figure 1. Rosemount 8800 Vortex Flowmeter

Ambient/process temperature limits

### Pipe Length Requirements

The vortex meter may be installed with a minimum of ten diameters (D) of straight pipe length upstream and five diameters (D) of straight pipe length downstream.

Rated Accuracy is based on the number of pipe diameter from an upstream disturbance. No K-factor correction is required if the meter is installed with 35 D upstream and 10 D downstream. The value of the K-factor may shift up to 0.5% when the upstream straight pipe length is between 10D and 35D. Please see Technical Data Sheet (00816-0100-3250) on Installation Effects for optional K-factor corrections. This effect can be corrected in the electronics.

#### Tagging

The flowmeter will be tagged at no charge, according to customer requirements. All tags are stainless steel. The standard tag is permanently attached to the flowmeter. Character height is 1/16-in. (1.6 mm). A wired-on tag is available on request. Wire on tags can contain five lines with up to 28 characters per line.

### Flow Calibration Information

Flowmeter calibration and configuration information is provided with every flowmeter. For a certified copy of flow calibration data, Option Q4 must be ordered in the model number.

## Product Certifications

### Approved Manufacturing Locations

Rosemount Inc. — Eden Prairie, Minnesota, USA  
 Emerson Process Management BV - Ede, The Netherlands  
 Emerson Process Management Flow Technologies Company, Ltd - Nanjing, Jiangsu Province, P.R. China

### EUROPEAN DIRECTIVE INFORMATION

The CE Declaration of Conformity for all applicable European directives for this product can be found on our website at [www.rosemount.com](http://www.rosemount.com). A hard copy may be obtained by contacting our local sales office.

### ATEX Directive

Rosemount Inc. complies with the ATEX Directive.

#### Flameproof enclosure EEx d protection type in accordance with EN50018

- Transmitters with Flameproof enclosure type protection shall only be opened when power is removed.
- Closing of entries in the device must be carried out using the appropriate EEx d metal cable gland or metal blanking plug.
- Do not exceed the energy level, which is stated on the approval label.

#### Type n protection type in accordance with EN60079-15

Closing of entries in the device must be carried out using the appropriate EExe or EExn metal cable gland and metal blanking plug or any appropriate ATEX approved cable gland and blanking plug with IP66 rating certified by an EU approved certification body.

### EUROPEAN PRESSURE EQUIPMENT DIRECTIVE (PED)

#### Rosemount 8800 Vortex Flowmeter Line Size 40 mm to 300 mm

Certificate Number PED-H-100  
 CE 0575

Module H Conformity Assessment  
 Mandatory CE-marking for flowmeters in accordance with Article 15 of the PED can be found on the flowtube body.  
 Flowmeter categories I – IV, use module H for conformity assessment procedures.

#### Rosemount 8800 Vortex Flowmeter Line Size 15 mm and 25 mm

### Sound Engineering Practice

Flowmeters that are SEP are outside the scope of PED and cannot be marked for compliance with PED.

## International IECEx Certifications

### Intrinsic Safety

**I7** Certification No. IECEEx BAS05.0028X

Ex ia IIC T5 (-60°C ≤ T<sub>a</sub> ≤ 40°C)

Ex ia IIC T4 (-60°C ≤ T<sub>a</sub> ≤ 70°C)

Input Parameters:

U<sub>i</sub> = 30 Vdc

I<sub>i</sub> = 185 mA

P<sub>i</sub> = 1.0 W

C<sub>i</sub> = 0 μF

L<sub>i</sub> = 0.97 mH

### SPECIAL CONDITIONS

When fitted with 90V transient suppressors (T1 Option), the equipment is not capable of passing the 500V isolation test. This must be taken into account upon installation.

### Type N Certification

**N7** Certification No. IECEEx BAS05.0029X

Ex nc IIC T5 (-40°C ≤ T<sub>a</sub> ≤ 70°C)

Ui = 42 V dc

### SPECIAL CONDITIONS

When fitted with 90V transient suppressors (T1 Option), the equipment is not capable of passing the 500V isolation test. This must be taken into account upon installation.

### Flameproof Certification

**E7** Certification No. IECEEx KEM05.0017X

Marking Remote Mount:

Transmitter: Ex d [ia] IIC T6 (-50°C ≤ T<sub>a</sub> ≤ 70°C)

Meter Body: Ex ia IIC T6 (-50°C ≤ T<sub>a</sub> ≤ 70°C)

Marking Integral Mount: Ex d [ia] IIC T6

(-50°C ≤ T<sub>a</sub> ≤ 70°C)

V = 42 Vdc Max

Um = 250V

### SPECIAL CONDITIONS

When the equipment is installed, particular precautions must be taken to ensure, taking into account the effect of the process fluid temperature, that the ambient temperature of the electrical parts of the equipment is comprised between -50°C and 70°C.

The remote mounted sensor shall only be connected to the transmitter with the associated cable, supplied by the manufacturer.

**K7** E7, I7, and N7 Combination

## Chinese Certifications (NEPSI)

### Flameproof Certification

**E3** Certification No. GYJ071327X

Ex d [ia] IIC T6 (-50°C to 70°C)

### Intrinsic Safety

**I3** Certification No. GYJ071171X

Ex ia IIC T4/T5

T4: (-60°C to 70°C)

T5: (-60°C to 40°C)

Input Parameters:

U<sub>i</sub> = 30 Vdc

I<sub>i</sub> = 185 mA

P<sub>i</sub> = 1.0 W

C<sub>i</sub> = 0 μF

L<sub>i</sub> = 0.97 mH

### Type N Certification

**N3** Certification No. GYJ071193X

Ex nAnL IIC T5 (-40°C to 70°C)

42 Vdc Max

**K3** E3, I3, and N3 Combination

## Japanese Certifications (TIIS)

### Flameproof Certification

**E4** Transmitter - Ex d [ia] T6

Remote Sensor - Ex ia IIC T6

## Rosemount 8800D With FOUNDATION™ Fieldbus Protocol

### North American Certifications

#### Factory Mutual (FM) Approvals

- E5** Explosion-proof for Class I, Division 1, Groups B, C, and D.  
Dust Ignition-proof for Class II/III, Division 1, Groups E, F, and G.  
Temperature Code T6 (-50°C ≤ Ta ≤ 70°C)  
Factory Sealed  
Enclosure Type 4X
- I5** Intrinsically safe for use in Class I, II, III Division 1, Groups A, B, C, D, E, F, G;  
Class I, Zone 0, AEx ia IIC T4  
Non-incendive for Class I, Division 2, Groups A, B, C, and D.  
NIFW (Non-incendive Field Wiring) when installed per Rosemount Drawing 08800-0112  
T4 (-50°C to 60°C)  
Enclosure Type 4X.
- IE** FISCO/FNICO for Class I, Division 1, Groups A, B, C, and D.  
Class II/III, Division 1, Groups E, F, and G.  
T4 (-50°C to 60°C)  
when installed per Rosemount control drawing 08800-0116.
- K5** E5 and I5 combination

#### Canadian Standards Association (CSA) Approvals

Single Seal

- E6** Dust Ignition-proof for Class II and Class III, Division 1, Groups E, F, and G;  
Class I, Zone 1, Ex d[i]a IIC CSA 06.1674267  
T6 (-50°C to 70°C)  
Factory Sealed  
Single Seal.  
Enclosure Type 4X.
- I6** Intrinsically safe for use in Class I, II, III Division 1, Groups A, B, C, D, E, F, G;  
Non-incendive for Class I, Division 2, Groups A, B, C and D  
T4 (-50°C to 60°C)  
Single Seal.  
Enclosure Type 4X.
- IF** FISCO/FNICO for Class I, Division 1, Groups A, B, C, and D;  
T4 (-50°C to 60°C)  
When installed per Rosemount drawing 08800-0112  
Enclosure Type 4X
- K6** E6 and I6 combination.

### Combination Certifications

- KB** E5, I5, E6, and I6 Combination

### European Certifications

#### ATEX Intrinsic Safety Certification

- I1** Certification No. Baseefa05ATEX0084X  
ATEX Marking II 1 G  
EEx ia IIC T4 (-60°C ≤ Ta ≤ 60°C)  
**CE** 0575  
Input Parameters:  
 $U_i = 30 \text{ Vdc}$   
 $I_i = 300 \text{ mA}$   
 $P_i = 1.3 \text{ W}$   
 $C_i = 0 \mu\text{F}$   
 $L_i = 20 \mu\text{H}$

#### SPECIAL CONDITIONS FOR SAFE USE (X)

When fitted with 90V transient suppressors (T1 Option), the equipment is not capable of passing the 500V isolation test. This must be taken into account upon installation.

#### ATEX FISCO/FNICO

- IA** Certification No. Baseefa05ATEX0084X  
ATEX Marking II 1 G  
EEx ia IIC T4 (-60°C ≤ Ta ≤ 60°C)  
**CE** 0575  
Input Parameters:  
 $U_i = 17.5 \text{ Vdc}$   
 $I_i = 380 \text{ mA}$   
 $P_i = 5.32 \text{ W}$   
 $C_i = 0 \mu\text{F}$   
 $L_i < 10 \mu\text{H}$

#### SPECIAL CONDITIONS FOR SAFE USE (X)

When fitted with 90V transient suppressors (T1 Option), the equipment is not capable of passing the 500V isolation test. This must be taken into account upon installation.

#### ATEX Type N Certification

- N1** Certification No. Baseefa05ATEX0085X  
ATEX Marking II 3 G  
EEx nAnL IIC T5 (-40°C ≤ Ta ≤ 70°C)  
Input Parameters:  
 $U_i = 32 \text{ Vdc MAX}$   
 $C_i = 0 \mu\text{F}$   
 $L_i = 20 \mu\text{H}$

#### SPECIAL CONDITIONS FOR SAFE USE (X)

When fitted with 90V transient suppressors (T1 Option), the equipment is not capable of passing the 500V isolation test. This must be taken into account upon installation.

# Rosemount 8800D

## ATEX Flameproof Certifications

**E1** Certification No. KEMA 99ATEX3852X

ATEX Marking Remote Mount:

Transmitter: II 2(1) G

EEx d [ia]IIC T6 (-50°C ≤ Ta ≤ 70°C)

Meter Body: II 1 G

EEx ia IIC T6 (-50°C ≤ Ta ≤ 70°C)

ATEX Marking Integral Mount: II 1/2 G

EEx d [ia] IIC T6 (-50°C ≤ Ta ≤ 70°C)

0575

V = 42 Vdc Max

Um = 250V

## SPECIAL CONDITIONS

When the equipment is installed, particular precautions must be taken to ensure, taking into account the effect of the process fluid temperature, that the ambient temperature of the electrical parts of the equipment is comprised between -50°C and 70°C.

The remote mounted sensor shall only be connected to the transmitter with the associated cable, supplied by the manufacturer.

## ATEX Dust Certification

**ND** Certification No. Baseefa05ATEX0086

ATEX Marking II 1 D T90°C (-20°C ≤ Ta ≤ 70°C)

Ui = 42 Vdc

0575

**K1** E1, I1, N1 and ND Combination

## International IECEx Certifications

### Intrinsic Safety

**I7** Certification No. IECEx BAS 05.0028X

Ex ia IIC T4 (-60°C ≤ Ta ≤ 60°C)

Input Parameters:

Ui = 30 Vdc

Ii = 300 mA

Pi = 1.3 W

Ci = 0 μF

Li = 20 μH

## SPECIAL CONDITIONS

When fitted with 90V transient suppressors (T1 Option), the equipment is not capable of passing the 500V isolation test. This must be taken into account upon installation.

## FISCO/FNICO

**IG** Certification No. IECEx BAS 05.0028X

Ex ia IIC T4 (-60°C ≤ Ta ≤ 60°C)

Input Parameters:

Ui = 17.5 Vdc

Ii = 380 mA

Pi = 5.32 W

Ci = 0 μF

Li < 10 μH

## Type N Certification

**N7** Certification No. IECEx BAS 05.0029X

Ex nC IIC T5 (-40°C ≤ Ta ≤ 70°C)

Ui = 32 Vdc Max

## Flameproof Certification

**E7** Certification No. IECEx KEM 05.0017X

Marking Remote Mount:

Transmitter: Ex d [ia] IIC T6 (-50°C ≤ Ta ≤ 70°C)

Meter Body: Ex ia IIC T6 (-50°C ≤ Ta ≤ 70°C)

Marking Integral Mount: Ex d [ia] IIC T6  
(-50°C ≤ Ta ≤ 70°C)

V = 32 Vdc Max

Um = 250V

## SPECIAL CONDITIONS

When the equipment is installed, particular precautions must be taken to ensure, taking into account the effect of the process fluid temperature, that the ambient temperature of the electrical parts of the equipment is comprised between -50°C and 70°C.

The remote mounted sensor shall only be connected to the transmitter with the associated cable, supplied by the manufacturer.

<b>Typical Model Number: 8800D F 020 S A1 N 1 D 1 M5</b>		

(1) Available on flanged and dual style meters from 1/2" - 8" (15-200 mm) and Reducer style meters from 1" - 6" (25-150 mm).

(2) Only available for stainless steel flange and dual style meters from 1" - 8" (25-200 mm). Consult factory for other materials.

(3) W1, W4, W8, and W9 are only available with Meter Style F from 1/2-in. (15 mm) to 4-in. (100 mm) in SST.

(4) No TIIS approval

(5) Includes five Analog Input (AI) function blocks, 1 PID function block, 1 Integrator (INT) function block, 1 Arithmetic (ARITH) function block and Backup Link Active Scheduler.

(6) Available in Stainless Steel meter body only. Available with Rosemount 8800DF from 1 1/2-in (40 mm) through 12-in. (300 mm). Available with 8800DR from 2-in (50 mm) through 12-in (300 mm). Not available with 8800DW or 8800DD. Not available with flange codes A7, A8, B7, B8, C7, C8, D7, D8, G7, G8, H7, H8.

# Rosemount 8800D

---

- (7) Fieldbus Intrinsic Safe Concept available with output code F (FOUNDATION fieldbus digital signal).
- (8) TIIS Flameproof Approval requires G<sup>1</sup>/2 conduit entry.
- (9) Not available with certain hazardous location certifications. Contact a Rosemount representative for details.
- (10) NAMUR compliant operation and the alarm latch options are pre-set at the factory and can be changed to standard operation in the field.
- (11) V5 only available with no approval, it is standard with the other approvals.
- (12) XX is a customer specified length in feet.
- (13) The CPA option is not available on wafer, 1/2-in. flange, or 1-in. reducer units. In addition it is not available on 1" flanged and 1.5" reducer JIS 10K, DIN PN40, or DIN PN16.
- (14) Q69 available for all Nickel Alloy wafers and stainless steel wafers in line sizes 1/2-in. (15 mm), 6-in. (150 mm), and 8-in. (200 mm).
